Dedication

The Quantum Key – The Simple Guide to the Quantum World, Unlock Your Infinite Abundance is dedicated to Rodger Q. Estes. Rodger is the first mentor who came into my life immediately after a major transformation that I experienced at twenty-two years old. Eleven years later at thirty-three, I decided to write this book to describe what I had been able to synthesize in regards to energy, what it is, and where it comes from.

Rodger is the world's first and only non-Chinese certified Qigong master who is actually certified by the Chinese Qigong Delegation in Beijing, China. He is a natural born Qigong Master who developed his abilities through various spontaneous experiences such as kundalini risings -- instead of traditional exercises. There were other experiences as well.

I had experienced many of the same things that Rodger had experienced. I was all alone and without guidance. At the exact time in my life that I needed desperately to meet someone who had answers to the exact things I was seeking, I was introduced to Rodger, who happened to be the most qualified person in the world that I could have met at that exact

moment. Thank God for profound synchronicities!

Rodger is responsible for introducing me to John Bedini around 1999, which launched my obsession with “free energy” technologies.

Ever since then, I have searched for a unified connection between the quantum (super small) and the macro universe (super big) with a raging obsession. Along my journey, I’ve had some interesting revelations that can help just about anybody get the picture of what the universal Infinite Potential is and how it interacts with the physical universe.

Thank you Rodger for being one of the best friends anyone could ever have and a profound one at that!

Acknowledgments

Rodger Q. Estes – Thank you for all the profound experiences and synchronicities that we have been through together and also for introducing me to John Bedini during some interesting times. You have given this world an incredible legacy.

John C. Bedini – Thank you for your generous and vast contributions and for helping me understand many profound concepts about nature and energy that I have always dreamed of learning. I enjoy all the time I've spent at your shop watching the world change before my eyes.

Peter Lindemann – Thank you for your tireless pursuit in the energy field and helping me to understand some of the complex concepts in simple ways. Thanks for your openness in sharing your experience and knowledge with me and for believing in my projects.

Tom Bearden – I have never had the privilege of meeting you but you're one of the most influential people in my life. The knowledge you share has helped me see the light in many ways.

Love & Gratitude

Thank you God for coming up with such a mind-blowing universe! 😊

Thank you to all my loving family and friends who accept me for who I am and for tolerating a little craziness once in a while.

Thank you Kevin Pirolo, Jill Pirolo and Gary Rinaldo, the other co-founders of Energetic Science Ministries, for all your hard work and support.

Thank you to all the wonderful PATHS affiliates for stimulating much of the desire to work on this book project and for being a part of my definite life purpose.

Thanks to all the incredible energy technology researchers and contributors at Energetic Forum.

Thanks to everyone who gave me valuable insight and assistance, which helped to make some of the concepts in this book clearer. As my understanding grows, this book will forever be a work in progress.

Summary of Chapter	166

Foreword

What is magic? Are there people on this planet who can do the “impossible?” Every generation is confronted with these questions, and every generation answers them with an expanding insight.

What is Time? What is Matter? What is Light? What is Gravity? What is the nature of duality? These are questions that humans have been asking themselves as far back as history is recorded, and farther back still toward the dawn of time.

In the midst of this pre-packaged information age, where the “news” is presented along with “what you are supposed to think about it,” it is increasingly important to explore alternate possibilities and especially personal meanings and values.

Much of what is presented in the media as fact and science is really nothing more than a subtle form of advertising of a certain worldview. To escape this web of external influences, the reader must develop an increasing trust and belief in oneself. So, a BIG question, like “What is time?” is not as important as “How do I experience Time?” The

answer to this question will never appear on the evening news.

Most of life's really important questions will never be sold to you on TV. What is Love? What is Trust? What is Honesty? How do I find the answers to the questions I don't know how to ask?

In *The Quantum Key*, Aaron shares his journey into this unadvertised experience of the world with honesty, enthusiasm, and insight. He encourages and provokes the reader to expand their worldview to include those ideas previously sold as impossible and unknowable.

Aaron recounts many of the experiments he has run, both in his mind and in the physical world, that provide evidence of an experience of substance and validity beyond appearances. The subconscious mind can be released from its previous programming as easily as a computer is updated with new software. And the science of tomorrow can be demonstrated as easily as a simple science fair motor on the kitchen table.

If you take a few moments and walk this path with him, you may find that life's possibilities are much greater than you think.

Peter Lindemann, DSc

Preface

In all my research into various areas of physics and more specifically in applied physics as related to healing, free energy and consciousness technologies, I have yet to find a simple explanation that just about anyone can understand.

The purpose of *The Quantum Key – The Simple Guide to the Quantum World, Unlock Your Infinite Abundance* is to link together the smallest of the small to the biggest of the big in terms so simple that most people will be able to grasp the concepts. This book presents a *Unified Field Philosophy* for the general public, free energy experimenters and enthusiasts, and the spiritually inclined who have a passion for understanding the connection between themselves and the rest of the universe.

This book allows just about anyone to not only know that there are open systems and closed systems but to know what the difference is and why the awareness of these concepts will open a whole new world of thought.

Introduction

“All truth passes through three stages. First, it is ridiculed. Second, it is violently opposed. Third, it is accepted as being self-evident.” – Arthur Schopenhauer, German philosopher (1788 - 1860)

You are about to embark on an incredible journey. It will most likely be unlike anything you have ever experienced.

There is a lot of scientific knowledge at your disposal in today's information age. However, much of it is not science at all but rather information that is regurgitated over and over in order to preserve an antiquated way of thinking so as to not upset the applecart.

A large portion of mainstream science has already been experimentally proven wrong many times over. For this reason, I will only focus on cutting-edge science that turns conventional physics and many other fields flat on their ear.

On the spiritual side, many concepts have been shared for eons and many people have been able to intuitively grasp the gist of the teachings. But most people are still not able to fully put a finger on sound explanations that

make sense in a logical way as to what lies behind many of the forces of the universe.

Thankfully, a convergence is dawning and that convergence is the joining of spiritually intuitive concepts with hard-core science.

This book, *The Quantum Key – The Simple Guide to the Quantum World, Unlock Your Infinite Abundance* is the result of the joining of these two sides with a mix of imagination in order to provide you a simple, coherent, rational, and sensible model of how most of the universe is put together. This is done with very simple visual analogies, simple diagrams and common sense, and without techno-babble.

One of the big mysteries of the universe as far as science is concerned is how does everything seamlessly link together?

There are so many different parts of science that have compartmentalized different pieces so much that nothing seems to fit together anymore. This really speaks of the sad shape of the science of physics, medicine, and many other branch of academia.

There is quantum physics, which is a big buzzword right now. This is the science of the *stuff* that is not only at a level smaller than sub-atomic particles but is the substance that all fundamental things come from.

There is particle physics. This is the study of the smallest *pieces* found. Scientific experiments have proven that these particles are influenced by the very consciousness of our minds, even at a distance.¹

There is astrophysics, which is the study of our universe on a large scale. For example, this may include the study of gravitational attraction between two stars.

In addition to these, there are many other branches that delve quite deeply into their own specific areas.

In their own fields, scientists seem to have a pretty good grasp on what they're looking at, and based on what they study, they seem to be able to pin down the general nature of their topics fairly well. But, (and that is a big, big *but*) they all contradict each other so much that they really make a mockery out of each other.

Newtonian physics assumes there is an objective universe. It is also assumed there is a predictability to things that are observed.

Quantum physics describes a universe where everything is subject to the observer and there is a fair amount of unpredictability.

How can each one claim to be scientifically accurate if they contradict each other's principles?

¹ Richard Feynman, *The Character of Physical Law* (MIT, 1965), Chapter 6

Is someone wrong? Are they all wrong? Is there a possibility that they are right and there is a *missing link*? Or is God really just “playing dice with the universe?”

Now, if there were one area of science and nature that would help to iron this all out, it would be the science of tying it all together.

In physics, there is a concept of a “Unified Field Theory” that is supposed to be the seamless link between all the different branches. It is supposed to make sense of everything and why all the different fragmented pieces contradict each other.

Generally, there are four major forces in the universe: gravity, electromagnetism, strong force and weak force. A unified field concept would link those together. I am not specifically doing this. Instead, I will help you have a more useful understanding. I am going to guide you through from the small stuff to the big stuff in a very simple way. You will be able to understand how you personally fit into the universe in a way that you may have never considered.

This book is an explanation of my own model of the universe and is fairly balanced in philosophy and science. It is an exploration in imagination as well.

Why should you even care about any of this stuff? What does it matter to you if there is a

connection between quantum physics and astrophysics?

I'm going to ask you a question and I want you to be totally honest with me. What if you knew there were ways that this information could be applied so that you might not ever have to pay for an energy bill or medical bill again? What about cutting down the time it takes to get a college degree to months, weeks or even days or hours? Maybe instead of paying to fill your fuel tank with gas you just stuck your garden hose in it? Would those be a few reasons to pay attention to what is in this book? What about giving you the foundation necessary to understand really what energy and potential is and why hardly any physicist in the world can accurately define what they are? What about simply knowing that there is such a thing as a system that can output way more than what the operator input and it doesn't even violate any so-called laws of physics.

After reading this book, *The Quantum Key – The Simple Guide to the Quantum World, Unlock Your Infinite Abundance*, you will never look at this world the same. You will see the universe in a new light that you may have never thought possible and your horizons will be broadened beyond where most people dare to dream.

To finish off the journey, I will share with you some currently existing technologies that actually take advantage of some of the very principles in this book. It appears that the textbooks on physics and other related fields will have to be rewritten based on what these technologies demonstrate.

I learned long ago that documentation beats conversation. Practical applications of these concepts speak for themselves. Any intelligent person who is truly scientific in his or her analysis would find it difficult to argue with results from these technologies. Otherwise, they choose to be bound by the chains of dogma.

One thing to be aware of is that if you start reading something that you don't understand or you feel challenged by, simply move on to the next chapter. Each chapter contains a whole concept on its own and may or may not need the preceding chapter as a foundation.

Turn the page and let's get started because there are a lot of things in this world that we need to turn around right *now* and it all starts with *you* and *me*.

Congratulations for having the courage to enter territory where only a few dare to tread!

Aether

“The first philosophy (Metaphysics) is universal and is exclusively concerned with primary substance”... – Aristotle (340BC)

“...It finally turns out that one can, after all, not get along without metaphysics.” – Albert Einstein (Remarks on Bertrand Russell's Theory of Knowledge)

“According to the general theory of relativity, space without ether is unthinkable; for in such space there not only would be no propagation of light, but also no possibility of existence for standards of space and time (measuring-rods and clocks), nor therefore any space-time intervals in the physical sense.” - Albert Einstein

The Aether, or at least the concept of a **primary substance** that fills all space, has been subject to debate for eons.

The Aether that I share in this book is the smallest irreducible *stuff* that we know of. Everything is fundamentally composed of and interacts with this Aether in one way or another.

There are various names for the Aether. Dr. Tom Bearden, a pioneer in advanced energy systems calls it “the virtual photon flux of the quantum mechanical vacuum.”

Paul Dirac, another pioneering thinker, developed the concept of a sea of virtual particles, referred to as the Dirac Sea², which fills all space. These so-called particles are called virtual because as soon as they pop into our dimension they pop out and are therefore only virtually here. The virtual particles are composed of positive virtual photons and negative virtual photons or anti-photons.

Modern-day physicists are discovering the effects of a so-called *dark energy* -- this is the anti-photon part of the Aether that is self-ordering, time-reversed and also exhibits anti-gravity.

I believe it is necessary to make yet another distinction. The term *zero point energy*³ is loosely thrown around in many fields and is implied to be the same as the virtual photon sea of potential. It is not. If matter were brought down to absolute zero, supposedly there would be no movement. However, there is still energetic movement. That energy is what zero point energy is referring to.

² P.A.M. Dirac, ‘Is There An Aether?’ *Nature*, v.168, 1951, p.906.

³ <http://www.cheniere.org/correspondence/031405.htm>

Zero point energy is directly observable -- meaning that it is not in a virtual state. It may come from the vacuum but the chicken is not the egg. The virtual sea of potential is unobservable. That is why it is called *virtual*.

For purposes of this book, this virtual photon sea of potential is the exact same thing as the Aether. The Aether is composed of one-dimensional charges that are popping in and out of our existence, filling all space. The net result could be viewed as a *neutral particle*.

For every positive photon there is an anti-photon. Every time a positive photon has been channeled into the physical world and moves directionally foreword with time flowing foreword, there is an anti-photon that is coming back at it in the opposite direction and is traveling backwards in time, literally.

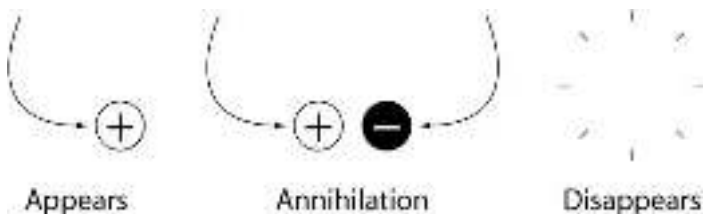

Figure 1.1 Virtual Photon Flux

When the two different photons encounter each other, they cancel each other out.

The net result could be considered a *Neutral Particle.*

However, there seems to be a bias for the positive photons in the universe. With all the self-annihilation, there is a remainder of positive charges that make up the physical universe that we see.

The positive photon can have entropy, which is a dying down of the potential. In other words, entropy is the process of anything ordered that breaks down into chaos. The positive potential will experience entropy whenever there is an interaction with any kind of resistance, heat, friction, etc...

The anti-photon is drawn towards any point of resistance, which is the opposite of the positive photon. This is known as negentropy as it is a self-organizing potential.

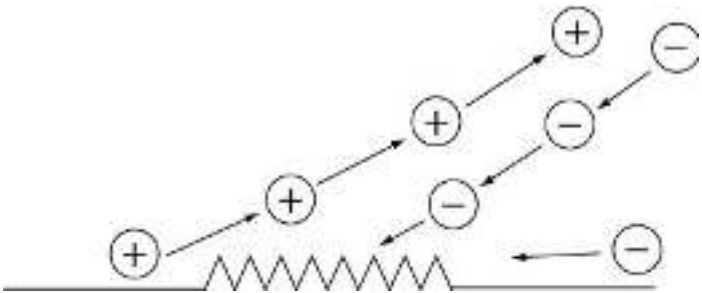

Figure 1.2 Point of Resistance

These photons in a virtual state are literally pure light potential because they are in a state of probability not yet manifest in our three-dimensional world as something with observable effects.

It has been estimated that in one cubic centimeter of space, there is more unorganized potential available than all the known "matter" in the entire universe.

The Aether is free of mass and is the source of all electrical charge. It is the precursor of any force. Force is an effect of Aether interacting with mass.

The definition of energy that I prefer to use is that energy is simply a word -- an adjective to describe the movement of potential from one level of potential to the other. When potential moves from high to low or low to high, the very action of potential moving is what energy is. There can be a positive energy event and there can be a negative energy event. Therefore, there is literally *no such thing* as energy.

The dictionary refers to energy as the capacity to do work. Capacity is a potential. Therefore, the dictionary says that energy is potential. This definition totally contradicts itself since energy and potential are actually opposites. There are other definitions that are more accurate in the same dictionaries but if two

definitions contradict, the dictionary needs to be rewritten.

You may have heard the cliché that “Nothing can travel faster than the speed of light.” That really means *nothing with mass* can travel faster than the speed of light. Since the Aether is free of mass, it can “travel” at the speed of light or faster. That means that it is able to be superluminal (faster than light speed) and can virtually exist at any place in space instantaneously.

Aether is the source of our life force energy. Since ancient times, this healing and spiritual energy has been referred to by many names such as *qi, ki, prana, lifeforce, spirit, and Breath of Life*.

We get Aether in our food, we breathe it in the air, we drink it in our water and it soaks into every fiber of our being from our external and internal environments.

The personality of the Aether is very chaotic and disordered, but there is an order to this chaos. You can see “snow” on a TV station off air and it is very chaotic looking, but it is fairly symmetrical and evenly spaced about and it takes on the appearance of having an overall order to it. It is chaotic but definitely not random.

A necessary distinction to be made is the difference between Aether and space. Aether

fills the space but is not the space. Space is what contains the Aether but is not the Aether.

A fish tank contains water but isn't the water that it holds. Also, distance is not necessarily space itself but is an effect of having space filled with Aether, which we will discuss later.

It is easy to see why the concept of the Aether has been the subject of debate going back for millennia. The ancient philosophies mostly in Eastern thought have clearly understood these concepts and it is only in the last century that the modern day scientists are catching up with ancient knowledge.

With today's brilliant minds, the Aether has been proven to exist scientifically, which is a giant leap for mankind and you'll see why throughout this book. It connects the dots and this is one of the main purposes of *The Quantum Key*. It is a dot connector between the Aether itself, gravity, inertia and other effects that are veiled under an unnecessary shroud of spiritual mysticism and supposed scientific mystery.

This infinite potential demonstrates a very high intelligence and spiritual nature of its own. This seems self-evident by observing its very nature.

Since it seems that the entire physical universe as we know it springs forth from this intangible medium and God is supposed to have

created the universe by nothing more than something intangible such as His Word, I believe that God used the Aether as His medium for creation. From the fact that the Aether can materialize and carry on form it is evident that the Aether has the ability to record, store and play back information in multiple ways.

When looking at anything physical at a small enough level, there is nothing but empty space to be found. Therefore, there is obviously something illusionary about our perception of so-called reality itself. This is an ancient concept known as Maya⁴, which is God's power of illusion that keeps the truth hidden from us behind a veil.

Eventually, the masses will be conscious enough to intentionally cultivate this Aetheric potential in their body and mind. Currently, this is done by qigong, yoga, tai chi and other exercises so that we increase the potential of our own true selves as the light beings that we are and without a shadow of a doubt we will then have true self-realization that we have never been separate from God, ever.

In the future, people will use advanced quantum technologies to increase their potential.

This will include machines that draw this Aether right out of time and space and allow a

⁴ Maya is Sanskrit, which literally means Ma=not Ya=this.

person to hook him or herself up to it in order to soak up this quantum potential.

Furthermore, there will be consciousness technologies that send super potentialized information directly into the Aether for person's subconscious mind to pick up on it through time and space, incorporate the information into their mind and body and start realizing their advanced potential. Perhaps the above two technologies already exist.

Thankfully, we are now in the age of understanding that makes the Aether usable to supply infinite energy for all our power needs. When this is realized by the current paradigm by the masses, there will be the realization that war based on oil is absolutely unthinkable.

Ponder this: The Aether is a gas made of something smaller than the smallest subatomic particles. It moves and flows like a gas under pressure and is all-pervasive. The *Breath of God* is literally this Aether that gives life to everything.

In the next chapter, you will see not only how we can tap this Aether and cause it to produce useful work in the physical world but also that the Aether has always been what was used all along. It is one thing to recognize its existence but if we are unable to intentionally transform it from a virtual state into a real observable state that can perform usable work in

this physical world, then we as humans cannot truly be empowered by it. But we will.

2

Dipole

“The Great One produces the two poles, which in turn give rise to the energies of the dark (yin) and the light (yang). These two energies then transform themselves, one rising upwards, and the other descending downwards; they merge again and give rise to form.” – Book 5, Chapter 2 from Lu-sih ch'un-ch'iu (Spring and Autumn Annals)

A dipole is something with two poles. A pole is a point where potential energy is made available. A dipole has a high pole and a low pole. For example, a battery is a dipole. One pole or battery terminal is positive and has high energy potential. The other pole or battery terminal is negative and has low energy potential.

The topic of a dipole follows the chapter on Aether because a dipole is the next logical step in understanding what we need in order to interact with the infinite potential.

The concepts in this chapter in regards to a dipole and its interaction with the Aether were

strongly influenced by Dr. Tom Bearden's work⁵. He solved the problem of where a dipole, such as a battery, really gets the source charge to power something. A battery is used as an example in this chapter because it is a simple thing most people can relate to.

Actually, every piece of so-called perceivable "matter" functions as a dipole no matter how big or small, but we'll just keep it simple for these examples.

It has always been a mystery in science as to where a battery gets its charge. Most people assume a battery charger fills the battery with something and when it "powers" a light bulb for example, it will do so until it "runs out" of energy.

The fact of the matter is that a battery charger, for example, does not fill the battery up in the same way that gasoline can fill a tank. This may sound weird but hang tight and you will clearly see why.

A dipole is a conduit, valve, or channel between the virtual photon potential and the physical world causing it to become energetic.

This is a very important concept because transforming potential into actual work that does something is required for anything to get done. John Bedini, the world-renowned inventor

⁵ [T.E. Bearden, The Source Charge Problem: Its Solution and Implications, August 18, 2003](#)

and electrical engineer always told me, “Aaron, we get paid for WORK!”

Anything that is something, which is the next step up from *potentially* being something has different polarities to it.

A particle is a dipole, a magnet is a dipole, a solar system, galaxy and the entire universe is a dipole. There may even be more than two poles, but there is going to be an overall high and low pole.

A bathtub filled with water with a plug in the drain is like the Aether in vacuum space away from any mass or dipole. There are no potential differences or poles in a practical sense and the water just sits there. If you pull the plug, a potential difference is created and the water has the tendency to have asymmetrical movement towards the drain, down the drain and so on doing work and exhibiting energy.

Remember, the water only started as potential work or potential movement but when the plug is pulled it has actual movement. First, the water is very symmetrical in nature and pulling the plug *broke the symmetry* of the water, causing it to move asymmetrically. Pulling the plug caused a potential difference.

Another simple example is a ball sitting on a flat piece of wood. The wood is fairly symmetrical in relationship to the ball. If you lift one end of the board, the ball rolls because you

created a dipole. The high part of the board is high potential and the low part of the board is low potential. You broke the symmetry of the state of the board and caused movement.

A battery is the perfect dipole for this explanation of how a dipole interacts with the Aether. The Aether is very symmetrical and seemingly homogenous in nature. A battery has two poles. It has a negative pole and a positive pole. One is low and the other is high as indicated earlier.

The electrolytes in a battery do *not* produce a mysterious charge that powers a circuit. The electrolytes do *not* supply electrons that go over the wires. The electrolytes do one thing and one thing only and that is to separate their own internal charges, pulling positive charges to one side and negative charges to the other.

A battery charger basically runs current through the electrolytes and plates in the battery getting the lead ions to move into charging mode. This causes low potential parts of the electrolytes to move towards the negative side of the battery and the high potential parts to move towards the positive side of the battery. That is a simplified explanation.

The stronger the separation in charges, the higher the potential difference is at the terminals. This is what produces a positive and

negative potential with respect to each other at the terminals, which is measured in voltage. The voltage is a measure of the pressure of the potential available at the terminals.

If you hook this battery to a light bulb, the charge-separated electrolytes are not what power the light bulb. The potential to power the light bulb comes from *outside* the battery.

If you were standing between two spring loaded walls and held your arms out to keep them apart, you would be acting like the “charged” up battery with electrolytes holding their charges apart. If suddenly you went to pick up something on a table in front of you with one hand, one wall would collapse and bonk you on the side of the head. You can’t hold apart the walls and do external work at the same time; you can only do one or the other. This is what the electrolytes are doing. They hold the walls apart without doing external work such as lighting a light bulb.

With the battery sitting inside 3D space, the terminals of the battery are submerged inside the Aether like a fish in water.

The potential differences at the terminals “break the symmetry” of the Aether, causing the positive potential charges to gather at the positive terminal and condense in an orderly fashion and the negative anti-photons to gather at the negative terminal and condense in an

orderly fashion. Like is attracted to like in the virtual time-reversed world and this is an example of a self-ordering or negentropic function.

If there is nothing connecting the terminals on the outside of the battery, the potential charges gathering at the terminals become manifest in this “dimension” and radiate away from the terminals in all directions at light speed. This is an example of how a battery is turning virtual photons into observable photons.

Physicists and electrical engineers have always said, “We don’t know what electricity is, we only know what it does.” That is a very limiting mindset. You’re about to find out what electricity is!

If you connect a light bulb to the terminals, you create a circuit with a loop that is closed. This means the output is rammed into the input.

The positive photon charges that are condensing and ordering at the positive terminal move over the surface of the copper wire, over the wire filament in the light bulb, and *towards the negative terminal*. The wire makes a very attractive or sticky path for this photon flow to cling to and move towards a lower potential.

The anti-photon negative charges that are condensing and ordering at the negative terminal move over the copper wire, over the

wire filament in the light bulb, and *towards the positive terminal*.

All of this flow going over the wire is known as the *Heaviside Flow*⁶.

Conventional science normally only teaches about the *Poynting Flow*⁷, which is only the very small portion of the total flow that gets diverged into the wire to induce electron movement. But there is a lot more than just the Poynting Flow component.

One estimate is that 10^{-13} (1/11 trillionths) is all that gets into the copper atoms of the wire from the total flow. Teaching that all the potential available is only what is intercepted into the copper atoms in the wire is like taking a cup of sand and trying to convince the students that it is the beach, which is a ridiculous and unscientific thing to do.

Poynting didn't say the other potential wasn't there. He just said that it wasn't relevant since it wasn't being used. Because he considered this potential irrelevant, he discarded it in the mathematics. That is covering up evidence, which is scientific treachery.

Tom Bearden has a great analogy for the difference between the Heaviside Flow and the Poynting Flow. If a ship is on the water

⁶ Oliver Heaviside, Electrical Papers, Vol. 2, 1887

⁷ J. H. Poynting, "On the transfer of energy in the electromagnetic field," Phil. Trans. Roy. Soc. London, Vol. 175, Part II, 1885, p. 343-361

powered by wind, there is a lot of wind all over the place and all the wind is the Heaviside Flow. However, the potential that is taught in school is the Poynting Flow, which if we stick with this analogy would be like saying that the only wind that exists is the wind that is hitting the sail on the ship.

A very tiny portion of the Heaviside flow that is going from the positive pole to the negative pole at near light speed is diverged into the copper atoms of the wire. The electrons in the third electron field are the most loosely bound. The electrons are negatively charged and are attracted to this positive energy flow so they try to jump towards the positive pole direction since they are attracted to the opposite potential.

This causes electron movement from the negative terminal direction towards the positive terminal direction. The electrons move at a few inches per hour and are mostly jumping from atom to atom in their vicinity instead of racing down the wire. The electrons doing this dance are called "Drude electron gas"⁸ named after Paul Drude who developed this model.

The entire idea of what lights up a light bulb is based on this electron flow. In my opinion there are not enough electrons moving to get backed up at the filament in the light bulb,

⁸ Drude, P. 1900. "Zur Elektronentheorie der Metalle." Annalen der Physik 1: 566; 3:369

which is a resistor intended to resist the electrons moving over it in order to light the bulb.

The conventional explanation is that the electrons pile up at the filament and cause so much friction and heat that it glows. What is the glow? Visible light is made of photons isn't it?

What I think is happening is this: The positive Heaviside Flow is causing the electrons to pile up at the filament but not enough to account for the light. I think that the electrons piling up are building up enough of the positive energy flow and that positive energy flow is condensing enough in that area and is dissipating outwards from the filament as visible light. So, I think that the light comes from the positive photon potential building up and not from the electrons themselves.

As the electrons move towards the positive terminal, they eventually will repel against the negative side of the inside of the battery causing it to disorder and become less polarized. The less polarized the electrolyte charges are, the more balance or equilibrium they attain. As the electrolytes reach equilibrium in their separation of charges, the voltage drops down because there is less and less of a potential difference at the terminals. This is why a battery voltage goes down, not because it ran out of something.

Just keep in mind the possibility that there are no electrons at all! Don't just assume that there are electrons just because we've always been told that. At one time, we were told the earth was flat, but that was disproved.

Anyway, no matter what is causing the actual visible light, you can easily see that the charge didn't come from a mysterious charge or from electrons supplied by the electrolytes inside of the battery.

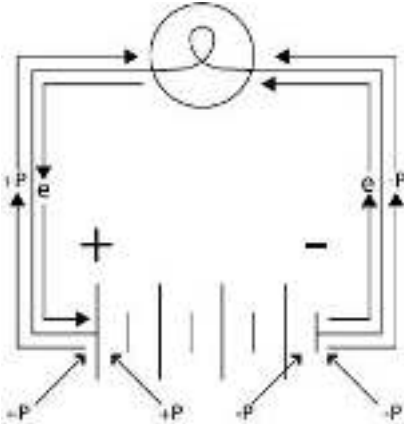

Figure 2.1 Three Flows Over A Wire

In the diagram above, you can see that there are *three* energy flows over a wire. There is the positive Heaviside Flow of photon potential shown by the $+P$, there is the negative flow of anti-photon potential shown by the $-P$ and then there is the Drude electron gas flow shown by e .

The bottom part of the picture is the battery. The left side is the positive terminal and the right side is the negative terminal. The top of the picture with the wire loop with a circle around it is the light bulb.

When the bulb is connected to a battery as shown, the three flows combined will make the light bulb light up and when that happens, that my friend, *is* what electricity *is* and now you know how it is caused!

Extrapolating from this concept, you can see how virtually every single piece of so-called “matter” is having this interaction with the Aether to sustain itself as physical manifested reality.

Imagine each acupuncture point or nerve beginning and ending or molecule or cell in your body and realize they are actually dipoles. Each one has its own higher and lower potentials and has access to this Aether that is so fine it goes through us the way water goes through a net.

There is one thing I want to point out. A circuit does not have to have the loop closed, which requires that the input source dipole die from having both ends rammed into each other.

A circuit can be an open loop so that the dipole continues to pour out usable potential without killing itself. Also, with simple measures, it can at least be extremely prolonged.

Each human being, animal, tree, solar system, atom and other natural systems are all open systems and they function as dipoles overall as well as each little piece that makes up the whole.

Please contemplate this: the Aether is a field of potential that gives thoughts their life. It is very symmetrical. When you have a thought, you break the symmetry of that mind field into something asymmetrical as far as your particular thought goes. Now, it has become energetic meaning that it has a form and movement. You have to keep increasing the potential that goes into this thought before nature breaks it down back into symmetrical equilibrium. With enough potential, it will manifest in one way or another into the physical world. The more super-potentialized the thought becomes, the higher probability of it manifesting quickly.

In the next chapter, we will explore the difference between open and closed systems.

3

Open vs. Closed Systems

“The world is full of abundance and opportunity, but far too many people come to the fountain of life with a sieve instead of a tank car... a teaspoon instead of a steam shovel. They expect little and as a result they get little.” – Ben Sweetland

If there were only one concept to really get from this whole book, it would be the difference between open and closed systems. In this world, we are living under the illusion that we are in a state of scarcity and that everything is running out.

The spiritually minded population is very familiar with the concept of abundance, as God and His Universe is not short of anything. However, there is a lack of consistency when the same population buys into the so-called energy crisis, in which oil is drying up and we are made to believe that we’re in trouble because of it.

Also, there is the ever-popular concept of the *Law of Attraction*, in which it is commonly believed that we can attract what we desire. But why is this and what makes it possible? Is it

noticed that there is more coming back to us than we put out and doesn't that seem to violate the laws of physics since supposedly a system cannot output more than the operator inputs?

What about the word *synergy*? That means for example that $1 + 1$ could equal 3. The result is more than the sum of the parts. The word synergy is in violation of the faulty mindset that there cannot be more out than in. People freely use this word with excitement without realizing that it violates their own belief systems when it comes to thermodynamics and the concepts of energy.

The environmentalists are concerned with using renewable energy resources such as the wind and the sun and certain fuels that are saner than gasoline. But the frame of reference they look through is still held captive to the fear of running out of current resources and this is pushing the alternative energy movement.

There are many solutions this kind of thinking has brought forward, such as wind, sun, water and other sources, but the understanding of how all these things work is still through the tainted eyes of, "*You can never get out more than you put in.*" As long as this is believed by both the conservative and liberal minded mentalities, there can be no real progress. The purpose of this chapter is to create

in the mind of the reader the consciousness of true abundance.

To be able to intellectualize the truth to how any system can easily output more work than what an operator has to put into it has remained one of the greatest mysteries since the beginning of time. Those who resonate with spiritual understandings have intuitively known it, but to put words to it and to be empowered by being able to define it has not been done until recent times.

This one concept, once understood, will endow you with great strength and power in all areas of your life. It is your birthright to know the truth about this and once known, no rational thinking, intelligent human being can ever deny it again.

If this one concept is understood so that virtually everyone knows the difference between an open system and a closed system, it will be as though the gates of heaven have been opened to pour abundance upon us like never before.

The difference between open and closed systems is one of the most powerful concepts and we must encourage the politicians, schools, religious leaders as well as many other groups to recognize this.

Let's start simply and then we'll see how the same concepts can be integrated into energy

producing machines that can rapidly solve all of the world's energy needs.

For starters, it is very important to understand the difference between efficiency and coefficient of performance (COP). Please do not be intimidated if this sounds complex because it is such a simple concept that you will probably master it by the end of this chapter.

Efficiency is the ratio of total energy input compared to total energy output. Every single system open or closed can never be over 100% efficient.

If there are 10 parts energy input to a system and 7 parts output, that is 70% efficiency. If 10 in and 5 out, that is 50% efficient. If 10 in and 9.99 out, that is 99.9% efficient. If 10 goes in and 10 goes out, that is 100% efficient. There cannot be any system that is over 100% efficient.

Every system obeys the so-called law of *conservation of energy*. Any systems when looked at as a whole will always have losses. Every system can lose energy through heat, friction, resistance or anything else that causes entropy or a reduction in the amount of available potential to do work.

All systems we know of are under 100% efficient. Refrigerators, flashlights, gasoline engines, nuclear reactors, and even so-called free-energy machines are all under 100% efficient.

The total amount of energy output from these systems is always less than the total amount of energy input. This is not going to change and it is not the purpose of this book to convince you otherwise. Believing in anything being over 100% efficient is ridiculous.

So, how can a system output more than the operator inputs and be under 100% efficient?

The keyword is *operator*. I did not say the output is compared to the total amount of energy input; I said operator input. This implies that there is other energy input to the system other than what the operator is supplying.

Therefore, if you take the input from the operator and you add it to any other input source, the sum would be the total input. If you compare that total input to the total output, it will be less than 100% efficient. That much is common sense.

What if you compared the *total* output to the operator's input not counting the other non-operator input? Well, simply put, there *can* be more output than the operator put in. You probably have a device like this running in your house right now and you don't even know it. We will clear this up shortly. And no, this does not violate any laws of physics.

Coefficient of Performance (COP) is the ratio between the operator input compared to total output. This does not include other input

that the operator of a system does not have to input. Also, just because there is a COP of a system, this does not require that there is other input other than the operator.

Now it is time to define a closed system and an open system so you can see how COP is more relevant to open systems.

A closed system is a system that is shut off to any other input from the environment. The only input to this system that is available for work is what the operator inputs. Other than that, there is no other input. It is always under 100% efficient, which is a given. COP is also always under 1.0.

The measurement of COP is the operator input compared to output. If 10 parts energy is input and 5 parts output, then $5/10 = 0.5$ COP. If 10 parts energy is input by the operator and 9 parts energy go out, then $9/10 = 0.9$ COP. If 10 parts energy is input by the operator and 1 part goes out, then $1/10 = 0.1$ COP. If 10 parts energy is input by the operator and 9.99 goes out $9.99/10 = 0.999$ COP. If 10 parts energy is input by the operator and 10 parts goes out, $10/10 = 1.0$ COP. 1.0 COP is the absolute, theoretical maximum possible for a closed system.

Why use COP at all if in closed systems it seems that the measurements are the same. One purpose that COP even exists is because it implies there are systems that have other input

besides what the operator inputs. Otherwise, it is pointless to even have such a thing as COP.

If you have a flashlight, that is a closed system. The only energy input into the system is whatever work was expended to separate the charges in the battery to make a dipole. That allows the light bulb to light up.

There is no other input into this system as it is running. There is no practical gravity input, no solar input, no wind input, no waterpower input, or any other input at all. Whatever work was done to “charge” the battery, is all the energy input into the system.

If the battery had 10 parts energy to charge it and 5 parts work became light that is $10/5 = 50\%$ efficient. $5/10 = 0.5$ COP. There are losses in electrical resistance, heat in the bulb, and so on. Work will always be equal to or less than the total input (100% efficient or less). To summarize, the operator supplies the total input and the system is closed to other input sources while running, so this system will always be 1.0 COP or less.

What happens is that the battery has a potential difference at the terminals. Both terminals are rammed into each other from the connection. Half the potential is lighting the bulb and the other half is disordering itself causing the battery to die down.

This will happen because the nature of the closed system is to wind itself down until there is no potential difference or gradient and equilibrium is attained. When the system is at equilibrium, it is dead.

This system obeys the laws of conservation of energy and entropy when it comes to the whole system. Ordered potential is disordered until there is equilibrium.

These are known as equilibrium systems and the laws of equilibrium thermodynamics are what accurately explain what these systems must do.

Anyone who thinks they know anything about physics is always more than happy to start preaching how everything in the Universe must obey the laws of thermodynamics and there is nothing that can ever violate these concepts. They don't know there is more than one type of thermodynamic system.

Virtually every single electric motor, gasoline engine, flashlight, television, and every other mainstream technology is a closed system. They do not interact with any other environmental energy input sources and are limited to whatever is directly supplied by the operator.

Now, it is time to understand what an open system is. *An open system is a system,*

which is open to other potential energy sources from its environment.

Every human being, plant, tree, planet, solar system, bug, galaxy, universe, cell, molecule, atom, sub atomic particle and virtual photon is an open system. They are not closed off to other sources of potential. They not only can but also do continuously interact with environmental sources of potential.

There is a common misconception that it is impossible to have an energy gain compared to the energy *you* the operator have to put into a system and pay for. We will clear this up with very simple analogies that just about anyone can understand.

Let's take a tomato seed and plant it in the ground, nurture it, and water it to get it going. Let's just say you put in 100 parts energy that you had to pay for with work you did. Let's say nature provided 900 parts energy in air, rain, nutrients in soil, and so on. That is 1000 parts energy input. So, there is both operator input and input from the environment.

Let's say there are 100 parts in losses. There is a loss in work necessary to push up against the effect of gravity and so on.

Let's say you wind up with 900 parts energy in fruit, leaves, wood, and so on. You only paid 100 but got 900 parts out.

It is obvious that in this open system that it is under 100% efficient. 1000 parts in and 900 parts out is $900/1000 = 90\%$ efficient.

This obeys conservation of energy and there is nothing woo woo here. It is totally in line with thermodynamics and any other area of physics that anyone would care to analyze it with.

COP has much more meaning when it comes to open systems.

In the tomato plant open system, the operator only had to put in and pay for 100 parts energy and with the free energy from the environment, 900 parts was the total output result.

If you take 900 parts total output and divide that by what the operator input, that is $900/100 = 9.0$ COP. That is 900% more energy than the operator input and is a net gain freely provided by nature.

This system violates common equilibrium thermodynamics because it is an open system. Since there is a constant influx of energy from the environment, it cannot come to equilibrium because it is a non-equilibrium thermodynamic system. These systems are even referred to as NET systems as in Net Gain.

There is energy that is dissipating outwards through entropy but there is also energy constantly coming in so it just cannot get

into balance or equilibrium with its environment.

Imagine that a tomato hits the ground, decomposes and a seed plants itself. When it grows and produces something, the COP of that system is *INFINITE!* It is totally self-powered and you don't have to pay for any input to get it going. There is *zero* operator input.

This is a natural system so what about a man-made system based on technology that could be made according to the principles of mechanical engineering and electronics? Let's take a refrigerator. If you have one, then you own a device that is producing more work than you have to pay for with electricity! This is a fact.

Let's say you pay for 100 parts energy in electricity to run a refrigerator, which is not the only energy input. The ambient heat in the fridge moves towards cold freon in tubes and that movement of the heat is provided free from nature and you do not have to pay one single penny to the power grid for that heat or for the movement of that heat.

The ambient heat free from nature may supply 400 parts energy into the overall system so that means that $400+100 = 500$ parts total energy input into the system.

Through friction of the motor and other losses, let's say that an entire half of the total energy input is wasted. Therefore if half were

wasted in a 500 parts total would result in 250 parts work being done; $250/500 = 50\%$ efficient.

It is easy to see that this open system obeys the conservation of energy and the total system exhibits entropy.

Now, if you only paid 100 parts energy in the form of electricity but 250 parts work wound up being done to make the fridge cold, $250/100 = 2.5$ COP. That is 250% more work being done than what *you* as the operator had to input! Is this not common sense or what? That is a NET GAIN in work being done compared to what you paid the power company!

There is less output compared to total input. It obeys conservation of energy. It is an open system that is described perfectly well by the extension to thermodynamics known as non-equilibrium thermodynamics so no laws of physics were broken.

A simple child's kite flying in the air is over 1.0 COP! There is a net gain in work done compared to what the child has to put in. The rest is free from the wind. It is still under 100% efficient but there is a lot more work being done than what the child is putting into the system.

Think about the above examples and it should be more than obvious that once you see the distinctions, it is just pure common sense.

Imagine an open system where you have an input battery to supply a little bit of work to

get a system going. Basically, the output is not being rammed back into the input so the loop stays open. Therefore, it is open to the universal potential and can use it as extra environmental input.

Let's say you have an open system battery charger powered by a battery. If 10 parts of work left the input battery, it is possible to get 11 parts of work out of the battery being charged. NO, this is NOT perpetual motion. But it is more than what left the input battery. This does not show over 100% efficiency. If 5 parts of energy came from the environment and you add that to the 10 parts that left the input battery, that is a total of 15 parts input to the whole system. That is 15 parts in and 11 parts out. $11/15 = 73.33\%$ efficiency. However, the operator input 10 parts and 11 parts went out. That means $11 / 10 = 1.1$ COP. That means it is 110% of what the operator had to input. That isn't efficiency since that only accounts for the operator input. Imagine a system like this with a bunch of batteries on the output. Imagine taking one and hooking it to an inverter to supply power back to the front battery. Do you think that would be possible? It is not only possible; it is being done right now as we speak! Stay tuned...

This does not violate any laws of physics. It obeys conservation of energy and the system as a whole exhibits entropy. The system is

obviously under 100% efficient but output *more* than what *you* had to put into it!

Besides, there are no such things as laws of physics. These so-called “laws” are simply self-imposed restrictions that only apply when you are within the parameters that they apply to. Step out of those parameters and they obviously won’t apply. It is as simple as that!

To learn more about these open systems, study Ilya Prigogine⁹ who won the 1977 Nobel Prize for these concepts.

Every human being is an open system and every investment that gets a return is an open system. Your investment is open to other sources of potential financial input that build on your initial investment. That is a COP of more than 1.0. Business or management models can be built according to open systems principles. Also, healing methodologies, schools, and virtually every other method or model can incorporate the concepts of open systems *consciously*. This is literally the physics of abundance.

Bringing open system concepts to consciousness allows mankind to perceive a world where we really are in an ocean of abundance instead of a world of scarcity. This takes abundance from some metaphysical and philosophical position and gives it something you can take to the bank.

⁹ [Ilya Prigogine, Nobel Prize in Chemistry in 1977](#)

The exotic battery charger is utilizing the Aether for its source of environmental energy input. There are other systems that can use sun, wind, rain, rivers, oceans, gravity, TIME and a multitude of other environmental sources to achieve a COP of more than 1.0 and this includes the input of the power of thought as well. If you are familiar with the *law of attraction*, then you are attracting way more than what your intention input into the collective mind.

Fully understanding this concept is necessary to get us out of the energy mess that we are in. This one concept lifts the veil of spooky mysticism that has always surrounded unusual energy technologies. People who are ignorant of the truth are always labeling these technologies as perpetual motion and scams.

People do not know what they do not know and this has been extremely prevalent in the world of energy technologies. The people who want to debunk these claims are not scientific and they do not realize that thermodynamics has been extended for decades.

Non-equilibrium thermodynamics or NET systems are taking the world by storm and **it is you the consumer who has the power with your buying dollar to demand that companies invest in NET systems.**

When looking at the concepts in this chapter, I believe that you will come to the same

conclusion that I have. Simply, we have not been told the truth and have been kept in the dark.

It takes conscious thinking people with a desire for truth in their hearts to realize that these concepts are not only common sense but are in full resonance with the truth about the principles of nature.

We are in a universe of abundance and some people have already figured it out. I believe that it is your God-given right to know these concepts and that the simplicity of them should be understood by the general public. Now they are. Please spread the word.

Please read this chapter a few more times and think about what kinds of open systems are all around you. Also, dream up some open systems of your own!

Later in *The Quantum Key*, you will learn of a few things that will help accelerate this globally!

4

Mass

“When a mass of matter is to be removed a certain force must be expended; and upon the proper economy of this force the price of transport will depend.” - Charles Babbage

Anything that is considered to be something, matter for example, has mass. This is true with individual particles, atoms, molecules and all other larger objects. Mass is considered to be the amount of matter and energy an object has.

Every atom is supposedly composed of a nucleus, which is being orbited by electrons. In hydrogen atoms however, there could be one electron. A nucleus is composed of at least one neutron and one proton. A neutron is composed of three sub-atomic particles, which are two “down quarks” and one “up quark.” A proton is composed of two “up quarks” and one “down quark.”

The force that holds these quarks together is known as the *strong force* and is quite possibly the strongest force in the known universe.

Therefore, these quarks that are held together may be the tightest packed things known to man.

Every atom takes up a certain volume of space. Within that space, the amount of space actually occupied by the particles that make up the atom is virtually nothing.

What does this mean? It means that no matter how massive or dense anything is, it is still virtually pure empty space. Take our solar system as an analogy. If the sun were the nucleus of an atom, its electrons would be orbiting way beyond the edge of our solar system. Actually, these electrons would be so far away that they would be in the next star system.

The scientists have looked and looked but when they look at the sub-atomic level, they have never discovered any real matter in the entire universe. What makes it seem like it is there? It is our conscious awareness as an observer that perceives there is something physical.

The information of thoughts directs photon potentials to exist in a particular place in a particular time. Mass consciousness is holding the intention for the physical particle reality to exist for all of us. In other words, the particles don't exist in any real sense. The appearance of particles is simply an illusion. This will be

explored more fully in a future book focusing on the mind, but the general idea is that ultimately, everything in the observable physical world is made of pure light energy.

Let's talk about something that is easier to relate to. If you have one cubic foot of lead sitting on Earth, it will have a certain amount of mass per atom that makes up that block. If you take this block of lead and have it floating in outer space away from any planetary gravity, it will still have mass but it will weigh nothing for practical purposes.

Weight and mass are different. Weight is a measurement of a certain mass in certain gravity. Therefore a mass with the identical amount of protons, which determine the mass, will weigh different on different planets with different gravity or when accelerating at different speeds because of inertia.

A block of lead is mostly empty space. The Aether is so fine that it can easily move through the empty space. The only component that resists, blocks, impedes and/or absorbs the Aether is the nucleus since the quarks that make it up are very tightly packed.

The nucleus of any atom is so tightly packed that it is pushing outwards on the Aether displacing it just like a ball of lead in a tub of water will displace a certain amount of the water. The Aether rebounds back towards the

center of the nucleus from where it was displaced just like water in a tub tries to move towards the space that the ball is occupying.

When the positive virtual photons encounter nuclear resistance, they are deflected. At the exact same time, the companion virtual anti-photon is drawn into the nucleus adding negative potential to it. The positive photons are deflected at points of resistance and the negative photons are drawn to and are absorbed by any resistance.

The negative potential is what powers an atom so that it continues its energetic movement. Atoms are obviously not sustaining perpetual motion by some initial push that they received a long time ago. If they were to do that, the momentum would have died down long ago and we would have no atoms in the universe today. The particles making up an atom have such little mass that they are unable to have real momentum to sustain them.

The positive photon potential pushing on the nucleus is what determines the mass. The more protons an atom has, the more resistance there is to the positive photon potential.

If an atom is away from any gravitational influence, it will have a baseline mass. If an atom is in zero gravity, it will absorb a certain amount of negative energy and will reflect a certain amount of positive energy. This absorption and

reflection rate will be fairly steady, allowing the atom not only to exist, but also to exist with a certain amount of mass. Since it is open to its environment, it sustains on the Aether.

In my opinion, the nucleus of an atom seems to be the tightest thing in the universe, meaning it has the least empty space. That means it will be displacing the Aether more than any other thing per unit of space that is occupied.

We have covered that mass is possible because of the outward displacement pressure the nucleus of an atom has on the Aether. Remember, the Aether is a gas and acts like a gas and displaces like a gas. The rebounding of the Aether, the reflection of the positive photons and the absorption of the negative photons are what hold the nucleus of an atom together causing its mass in this model.

Every piece of "matter" has its own particular "atomic matrix" or atomic spacing geometry based on its mass. A piece of wood will have a very spacious matrix compared to a piece of lead, which will have a very tightly spaced matrix.

On a scale larger than a single nucleus, there is a lot of empty space. The Aetheric rebounding effect, caused by a collective mass like the Earth, is not as strong compared to just a nucleus since on the larger scale most of it is

empty space. This is what the next chapter on gravity will cover.

5

Gravity

“Someday, after we have mastered the winds, the waves, the tides and gravity, we shall harness for God the energies of love. Then for the second time in the history of the world, we will have discovered fire.” - Teilhard de Chardin

Gravity is considered one of the most evasive mysteries of the Universe. In my opinion, it is very simple when we just look at it for what it is and remember what causes mass.

This viewpoint sees gravity without math and without complicated jargon, which only obscures the innate reality of what it is.

Any object sitting inside 3D space and time will be displacing a certain amount of Aether just as a ball sitting in a tank of water will be displacing some of the water.

A bowling ball is displacing more Aether than a golf ball. A golf ball is displacing more Aether than a BB. A BB is displacing more Aether than a grain of sand. A grain of sand is displacing more Aether than a molecule of lead.

A molecule of lead is displacing more Aether than an atom of lead.

A ball made of foam twice as large as a bowling ball is *not* displacing more Aether than the bowling ball. So, it is not size dependent but dependent on how tight the atomic matrix is within something. The tighter the matrix, the more Aether is displaced by the mass.

Now, let's get to the big stuff. Planet Earth is displacing a certain amount of Aether based on all the collective mass. There is an overall outward push on the Aether by the entire planet as if the planet were a gigantic atom. As the mass of the Earth is displacing the Aether from the center outwards, that Aether rebounds back to the place where it was displaced.

If you put your finger into a balloon, the balloon will try to rebound back to the space where your finger is. If you drop a lead ball into a tub of water, the water tries to move into the space where the lead ball resides from all sides.

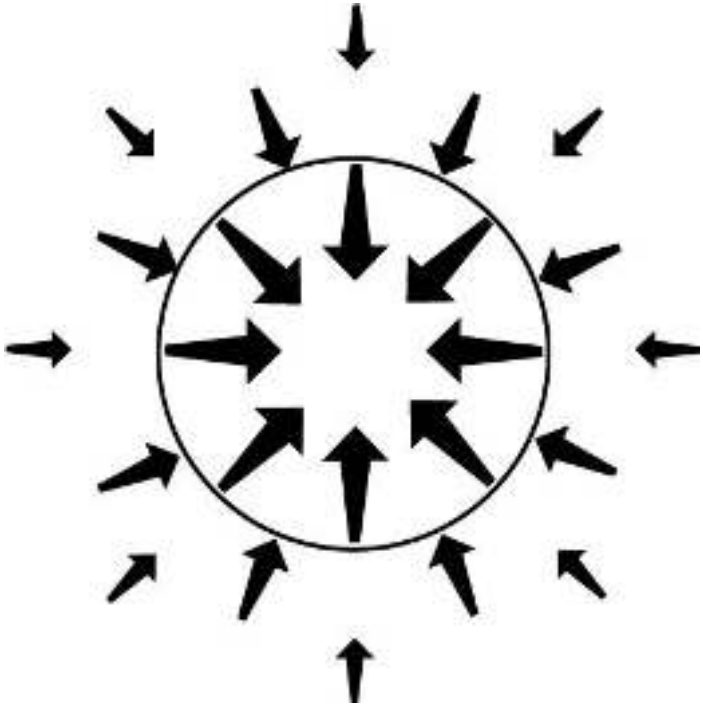

Figure 5.1 Aether Rebounding Back

The above illustration shows the Aether pushing back towards the mass from where it was displaced by the nucleuses of the atoms that make up the mass. The larger arrows represent an increase in density of the Aether and the smaller arrows represent a decrease in the density.

The Aether all around the planet is rebounding back towards the center from the outside direction. The Aether is so small it slips through all the empty space, which makes up

the atoms. Whatever Aether isn't resisted, deflected or absorbed by the nucleuses is deflected around. Since the Aether is actively moving back to where it was displaced from by the planet, all atoms are being pushed asymmetrically towards the center of the mass.

Both wood and lead have different masses but still they have mostly nothing but empty space.

If you have a one cubic foot block of wood sitting on the ground at sea level and you lift it up, it will have a certain weight to it. If you have a one cubic foot block of lead in the same situation, it will have a heavier weight to it compared to the piece of wood.

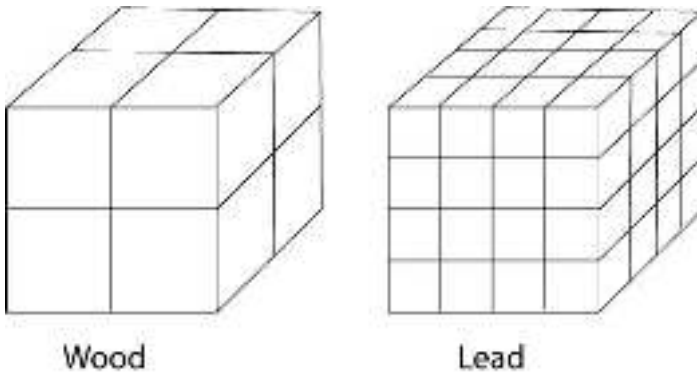

Figure 5.2 Wood & Lead Atomic Matrix

The illustration above shows that two blocks of equal size of wood and lead have

different “densities.” The analogy of water moving through a net explained below clarifies this concept.

If you take a net with one square inch spacing and swoosh it through the water, there won't be much resistance to the water. If you take a net with one square millimeter spacing and swoosh it through the water, there will be a lot more resistance to the water.

The one square inch net is like the piece of wood and the one square millimeter net is like the block of lead. As the Aether moves from above and rebounds back towards the center of the planet from where it was displaced from, it is going through the empty space in the wood and lead. It is moving from above, through the objects, and then onwards to the center of the planet.

The wood has more open space and therefore less mass in its nucleus in the atomic matrix and will resist the Aether less. The lead has less open space and therefore more mass in its nucleus in the atomic matrix and will resist the Aether more.

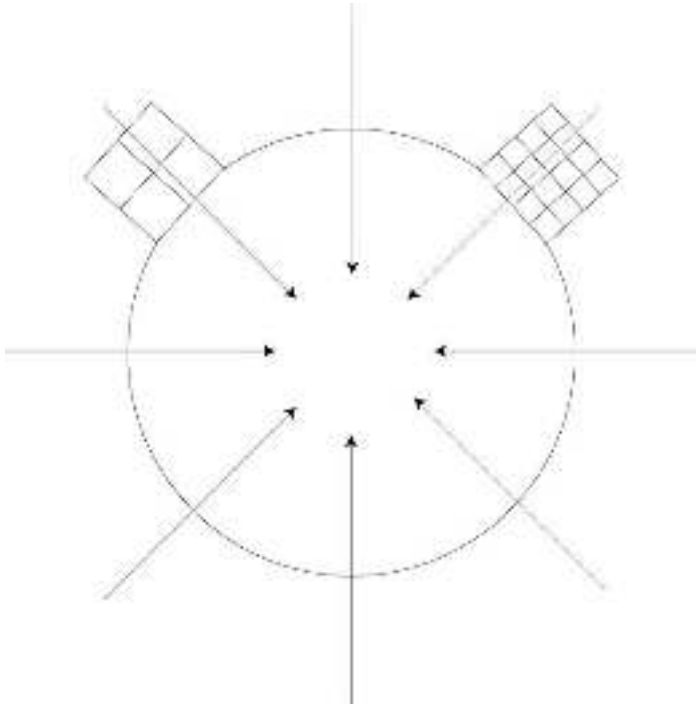

Figure 5.3 Wood & Lead On Earth

This is the reason that the wood is lighter when lifting it up and the lead is heavier when lifting it up. The wood meets less resistance against the downward push of the Aether and the lead meets more resistance when lifting up against the downward push of the Aether.

This appears to be the simplest, most common sense and naturally harmonious explanation as to what gravity really is. It is mass's *passive* resistance to the Aether moving through it. There is no such thing as a

gravitational pull. There is only a downward gravitational push. This downward Aetheric flow is what keeps objects on the ground, and what prevents them from being flung off into outer space by the spinning of the Earth.

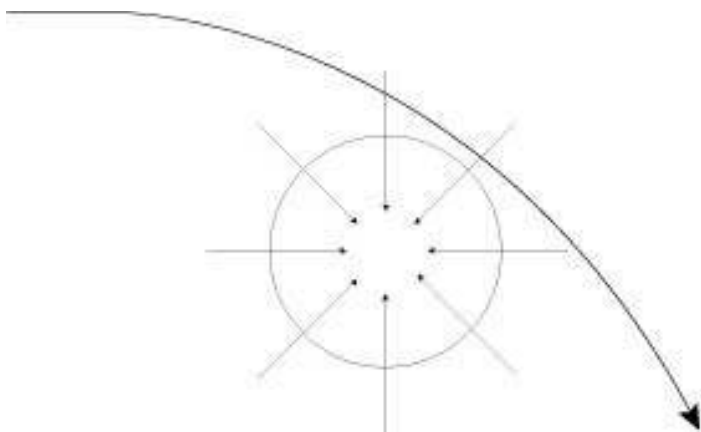

Figure 5.4 Bending Light

It is known that light bends near gravitational sources such as large planets or stars. The above illustration is showing how light is “bent” by gravity. When light moves near an object’s gravitational effect, the Aether that is displaced and is moving back towards the center of the Earth is pushing the light towards the object. More accurately, the Aether, which is the medium for the light wave to propagate, has dropped closer to the planet.

When the light gets past the area of the source of gravity it is on a slightly deviated trajectory from what it was originally on. This seems to be why light appears to “bend” near strong gravity.

It is interesting to note that a rotating sphere actively draws the Aether towards it more strongly than the innate “rebound force” of a sphere sitting still. If the rotating sphere is generating a magnetic field, the rotating magnetic field even more strongly draws in the Aether. So take note that the Earth, for example, generates a magnetic field and actively pulls the Aether towards it more strongly than if the Earth was sitting still with no magnetic field.

A very well known concept is that if there are two large bodies such as two suns or two large planets that are near each other, the one with more mass will have a tendency to “attract” the smaller one to it. This has nothing to do with magnetism. Instead, it is simply gravitational attraction or gravitation. Either way, they gravitate towards each other.

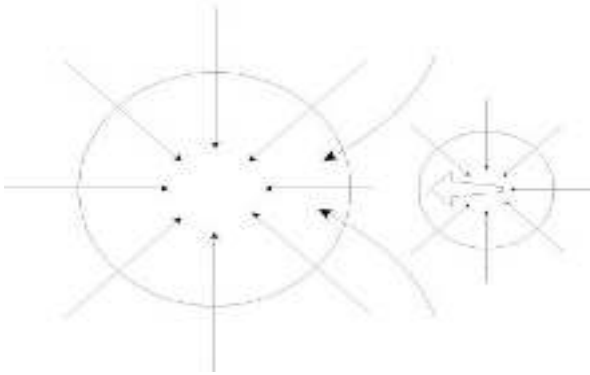

Figure 5.5 Bodies Attracting

The illustration above shows that the sides of the masses that are facing each other will interact with the same Aether between them. The Aether moving towards the center of each will have a stronger rebound towards the center of the one with more mass.

Here is an analogy. If a small sailboat is sitting in water and a large tanker suddenly appeared in the water next to it, the sailboat would be pulled towards the large tanker.

The smaller mass's side facing the large object will have some of the Aether on that side lessened by the larger mass's displacement. That means the smaller mass will have the Aether around it asymmetrically pushing it towards the direction where there is less Aether rebounding against it.

Most likely, the larger mass's side facing the smaller mass will only be slightly less than the rest of the Aether around it and the larger mass may also move slightly in the direction of the smaller mass. This movement will probably not be as strong as the smaller mass moving towards the larger mass.

This seems to explain why two bodies will gravitate towards each other. The general symmetry around the masses is broken by each mass subtracting some of the Aether between them, causing asymmetrical movement towards each other.

It is commonly said that two pieces of matter cannot occupy the same space, but this is debatable. The fact of the matter, and no pun intended, is that two masses *can* influence the same Aether in the exact same space between them.

A simply analogy to see how the smaller massive object is pushed in one direction is as follows. When you grab a bar of wet soap and squeeze it down with your palm, the overall force will push and squeeze the soap in the direction where your hand is *not* pushing down on the soap or pushing down the least. This is why the soap flies out or is pushed in that direction. Of course if you pushed down on the soap in all directions equally, it would just stay there.

If there are two people, they each have their own gravity. Their gravity equals the whole of their being. If two people share an idea, concept or desire, their own gravitational symmetry is broken. Therefore, like gravitational attraction, the rest of their being will push each of them in the direction of the idea towards each other. This is one of the secrets of synchronicity that I have never revealed until now and will expand on at a later time.

Current ideas about gravity include theoretical gravitons that are elementary particles involved with the force of gravity. In my opinion, they do *not* exist.

Gravity is an effect of Aether and mass interaction and is not a particle or a thing. Science has a tendency to name every little effect in nature as a thing instead of recognizing the causes of the effects.

Another example of this is the concept of so-called gravitational waves. They also do *not* exist, in my opinion, and are not actual waves leaving a mass as described by science.

In conventional thinking, if there is a star with a mountain on it, the spinning star will emit gravitational waves because of the mountain on the star. If you take a log and hold it vertical in the water and spin it, there won't be any waves or much noticeable disturbance in the water if the log is very round, smooth and symmetrical.

However, if there is a bump on the log and the log is spun, wherever the bump is will cause an asymmetrical wave in the water. This log analogy clearly shows the conventional thinking of what a gravity wave is.

If a sphere is smooth like a round planet or star, the Aether rebounding back towards the planet is quite symmetrical and reaches smoothness with a bit of a swirl to it. There won't be any Aetheric "ripples" of space around it.

If a large planet has a large mountain on it and it is spinning at high speed, the mountain will offset the symmetrical roundness of the planet just like a bump on the log analogy. Supposedly, this planet will emit gravitational waves implying that waves are moving from the planet outwards.

What is most likely happening is that the Aether is rebounding in a more concentrated point where the mountain is because of more mass at that point. This causes the Aether to be tugged asymmetrically towards wherever the mountain happens to be.

That is possibly the simplest explanation of what gravitational waves are. There are no waves leaving the object; the opposite is probably true. The Aether is moving towards the object.

Another idea about gravity is the thought that all objects fall at the same rate. If you have two spheres of lead and one is one inch in diameter and one is one foot in diameter, they will both fall at the same rate.

The nucleuses of the atoms that make up both objects' mass will be at their own Aetheric absorption saturation point. Therefore, in free fall, the Aether will push equally on the nucleuses at the rate that the Aether is moving towards the center of the planet. The push is equal since the object isn't sitting on anything to resist against the downward movement of the Aether. There is however an exception to this principle.

If there is a sphere of silver and the other is iron and both are the same or different size, the silver one will fall slower. How so?

The iron one is a ferrous metal meaning it is iron containing and is able to be magnetized. It will fall at the normal predicted rate of fall.

However, the silver one, being a non-ferrous metal, will fall slower. As any non-ferrous metal cuts through a magnetic field or a magnetic field cuts through a non-ferrous metal, there is a resistive counter current induced into it called an eddy current. This counter current opposes the magnetic field and repels away.

So, when the silver ball is falling through the Earth's magnetic field, it is slightly repelled

away from the field and therefore falls slower. The difference is so minute it is not visible to the naked eye, but in the lab, this has been proven over and over with extremely small pieces and precision measuring equipment.

The whole premise for the Aetheric displacement and rebounding idea of gravity is based on the idea that the virtual particle sea has a tendency to fill all space since nature abhors a true vacuum. Being an infinite sea filling the entire universe, one single particle with even the smallest mass is exerting displacement pressure outwards on the *entire* universe. The tendency is for the Aether to move into the space that a particle occupies, pushing on it from all sides giving it the potential to “hold itself together.”

I believe that this is probably the most simple of all explanations of what gravity is. It is easy to understand, it is easy to visualize and it is easy for anyone to see it visually and explain it to others.

In the next chapter, we’ll see what inertia is and how it is based on the concepts that we have already covered.

6

Inertia

“When we try to pick out anything by itself, we find it hitched to everything else in the universe.” – John Muir

Inertia seems to be the big enemy of high-speed space travel. A spaceship approaching the speed of light would crush the spaceship and inhabitants to smithereens. Every time you speed up in a car and you feel yourself pushed back in the seat, that is inertia. What is pushing you back? It isn't the air resistance, since the windshield blocks that. It is something else.

To get around this unfortunate downfall of inertia, it is probably necessary to have some kind of understanding of what it is, which is discussed in this chapter. These ideas seem to be the simplest explanations. A possible application of this understanding will be discussed in the chapter covering *Superluminal Travel*.

Inertia is the *active* resistance of the nucleuses of moving atoms to the relatively “stationary” Aether. It is the same effect as gravity but it has an inverse cause.

To clarify, the virtual photon potential is not observable or resistible until a nuclear mass breaks the symmetry of it as a dipole. The positive virtual photons move towards the protons and are deflected away. At this exact moment, the anti-photons head in the opposite direction to be utilized as potential that causes work by the protons to sustain themselves.

The "default" mass of a certain material in zero gravity and at zero speed is set by the nuclear displacement of the Aether. The nucleuses have their own "default" suction and repulsion level to the positive and negative photon energy that determines its mass and this of course is determined by how many protons the nucleus has.

If you take a piece of wood and accelerate it in a certain direction, this will cause the effect of inertia, which is the resistance of the protons in the nucleus of the wood to the positive photons that are manifest by the presence of the mass or dipole.

While the wood accelerates, it becomes more *massive*. This doesn't mean bigger in size necessarily. This does mean that in addition to its own innate mass by virtue of its default displacement of the Aether, there is a stronger push on the nucleus by the positive photons and a stronger absorption of the anti-photons.

Speed itself is forcing a higher-pressure intake and repulsion of the photon energy and will therefore increase its mass.

For example, if you hook a hose, scoop or other contraption to the air intake of an automobile engine, it will funnel faster and higher-pressure air into the engine, increasing the power beyond what ambient air pressure would do. This is also what a turbo does under acceleration; it compresses air to high pressure, forcing it into the intake of an engine producing more power.

Therefore, it is easy to see that the speed of an object accelerating will increase the object's mass.

If energy equals mass multiplied by the speed of light squared, it seems obvious that in any given moment the mass itself is interchangeable with *time*. It seems that when a mass increases under higher speeds, what is actually happening is that *it is absorbing more potential for time to exist*. Give up some of the time potential and the amount of Aether being resisted in that short time is spread over more time. Therefore, there is less resistance and less so-called mass.

That is what inertia is, the building of this resistance. Instead of the wood being passive to the Aether moving through it like in gravity, it is *actively* moving through the "stationary" Aether.

Please note that Einstein's ideas are only accurate under certain parameters and under different parameters, they don't even apply. Therefore, $E=MC^2$ is only applicable under certain conditions and is not an absolute law of nature. Unfortunately, many conventional thinking scientists consider it their Holy Gospel. It has actually been disproved multiple times¹⁰ but that is a topic worthy of its own book.

Keep in mind that Aether has a certain spin to it that causes the physical universe to play out in spirals. This is a very deep subject that would fill volumes all by itself.

The bottom line is that inertia is a mass's *active* resistance to the Aether as the mass passes through the Aether. It is the same effect as gravity but caused in the inverse way.

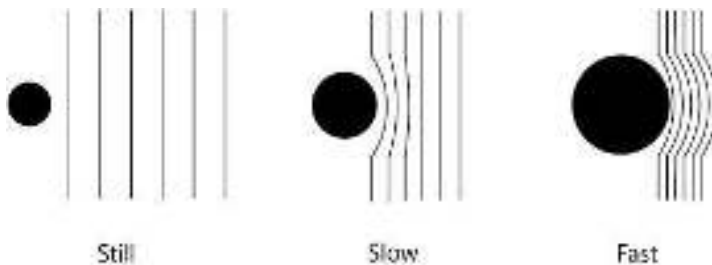

Figure 6.1 Inertia Comparisons

The figure above shows how mass increases with speed and how the Aether

¹⁰ [Depalma, Bruce. "Gravity and the Spinning Ball Experiment". Similarity Institute, 17 March, 1974](#)

becomes more and more dense, *relatively*. The mass is the circle and the Aether is the vertical lines. The closer the Aether lines are to each other the higher the Aether's relative density is to the moving object. With the faster motion, more Aether is resisted per unit of time than the still or slow motion illustrations.

If the larger circle indicating fast movement was showing gravity instead, the larger mass would be sitting still and would be pulling the Aether to it causing an increase in the Aetheric density compared to a smaller mass pulling Aether to it in a weaker fashion as in the slow moving example.

Another interesting thing to note is that the faster the movement or the higher the gravity, the more Aether there is *per unit of space*, or relative space in inertia's case.

When discussing inertia, which is usually equated with objects moving at fast speed, the topic of time dilation is often mentioned. Time is synonymous with distance in many ways and so it is only appropriate that we gravitate towards the subject of time in the next chapter.

7

Time

*“Time is the longest distance between two places.” -
Tennessee Williams*

If a clock were attached to a piece of wood and the wood were moving at a given speed, the clock would be ticking slower than a clock attached to a piece of wood standing still. Einstein described this as a *Time Dilation* effect¹¹.

We know this to be scientifically true under certain parameters. If two atomic clocks are synchronized on the ground and one is put on a 747, and this airplane is flown around the world, when the plane stops at the same place it left from, and the two clocks are measured, the one on the plane will be slightly behind showing that less time ticked as it was moving faster.

Higher mass equals slower time. If gravity on Earth increased, time would tick slower compared to an Earth with gravity at 1G. However, to the observer, time would still seem

¹¹ Einstein, A. (1905) "Zur Elektrodynamik bewegter Körper." *Annalen der Physik*, 17, 891. English: On the electrodynamics of moving bodies

to be ticking at normal speed. A difference would not be perceived.

Another time dilation concept is *Relativity of Simultaneity*. As a person travels, his clock ticks slower than a person standing still when both clocks are brought together for comparison.

However, there is a paradoxical concept and this is the idea that the person moving towards the speed of light, if looking back at the clock on the still ground, will see that clock ticking slower than his own! How can that be?

It seems obvious that this happens simply because when moving away at rapid speed, the light leaving the clock standing still is taking longer and longer to reach the fast moving person, which will show the fast moving person delayed information.

Time and light are funny companions. When you look at the stars, do you actually think you're seeing where they are? You're only seeing very ancient history of where they were when that light left them long, long ago. The light from those stars is traveling at light speed for millions or billions of years until it reaches Earth. Their current actual locations have changed, maybe some interesting things happened, and possibly many of these stars don't even exist anymore. But we won't see this for a long, long time, if ever!

There is an effect called *Gravitational Time Dilation*, which says time ticks slower in high gravity. With more mass, there is more Aetheric density at the object causing more gravity. That density will of course manifest slower time ticking.

Think about this: Only so much Aether can move through the wood at a given speed. This creates a relative resistance of the Aether on the wood especially on the side of the wood that is moving against the Aether. The more relative Aetheric density there is, the more mass the object has and the slower time can tick.

If you have a rubber band propeller wound up and you let it go in a tub of water, the propeller will spin at a certain rate.

If you put this same wind up propeller in the middle of some firm gelatin representing more Aetheric density, the propeller will spin slower with more resistance or not at all.

The potential for time to tick is locked up or conserved inside mass because of the higher Aetheric density there around the mass's environment.

The potential for mass to exist is locked up or conserved inside time energy. They are interchangeable.

Time is simply an effect of light moving through the Aether dissipating its potential

through entropy by hitting the nucleus of the atoms that make up mass.

Time is not a *something* but rather an *effect* that is relative to the density of the Aether with light traveling through it. The more dense the Aether caused by more massive objects, the slower the time because light is traveling slower and the less dense the Aether, the more time ticks because light travels faster.

The denser the Aether is, the slower the light travels through it. The slower the light can travel through it, the slower time ticks. The slower time ticks, the slower energy is dissipated. Therefore, the slower the entropy will be.

This most likely means that at infinite gravity or inertia, which would have infinite density of Aether, light would be at a stand still and the clock would not tick at all.

Just keep in mind that *if* everything went one step beyond time standing still, the whole system may just reverse and perhaps time would start ticking backwards. Or, maybe something else will happen that is different altogether.

Time is the effect of light moving through the Aether, which will be at different densities, depending on the gravitational or inertial effect happening. This determines the speed of the clock ticking. Actually, light is only a visible indicator.

The entire subject of time is determined by our perception or our observation and almost all of our observations are dependent on light.

Next, we'll look at the interaction of the actual observation machinery and light itself.

8

Light Speed

“Nothing in the universe can travel at the speed of light, they say, forgetful of the shadow's speed.” - Howard Nemerov

The density of the Aether determines the rate at which time will tick. This density determines how fast light can travel through space. In a region of space with high Aetheric density or relative density, light will travel slower through it. In a region of space with low Aetheric density, light can travel more quickly through it.

Light speed is not a constant but only defined based on an average speed of light in a vacuum. Regardless of some pre-determined speed, light will always be traveling at the speed that it can travel inside of Aether of a certain density.

If the person speeds up, their perception apparatus is subject to the presence of higher Aetheric density. Their reference point is subject to the effects of increasing mass. In this high relative density of Aether, light is traveling

slower. Therefore, their perception is slowed accordingly. Because of this slowing of perception in accordance with their conscious awareness, common sense says that *of course light will appear to be traveling at light speed no matter what speed the observer is traveling at!* Of course, in this higher density, time is ticking slower compared to someone standing still in low Aetheric density.

If someone were standing still and the relative or actual Aetheric density was very low, then light would speed quickly through this Aether. The person's perceptual apparatus inside this Aether would be subject to this area. The light would travel more quickly in this low Aetheric density area and their perception would observe the light according to this faster light speed. Therefore, *light of course appears to be traveling at light speed!*

In the lower density Aether, time ticks faster. In the higher density Aether, time ticks slower. However, an observer in either the higher or lower density Aether will not know the difference.

Perception and observation comes into play with particle-wave theory, which is another topic altogether.

For now, let's take a journey into the future and see how we might be able to beat the

speed of light in a spaceship without suffering from inertia crushing us to pieces.

9

Superluminal Travel

“Time travel may be achieved one day, or it may not. But if it is, it should not require any fundamental change in world-view, at least for those who broadly share the world view I am presenting in this book.” - David Deutsch

Traveling faster than the speed of light has been dreamed about for many years but the concept has mostly been stuck in the realm of science fiction books and movies.

As far as “real” science is concerned, traveling faster than the speed of light or instantaneously from point A to point B via a wormhole, which most of the mainstream thought seems to focus on, is probably *not* the only option. The wormhole idea seems to be a very complicated way to solve a very simple question.

It is said that anything with mass cannot travel faster than the speed of light. What about something with no mass? It could then be faster than the speed of light or even be instantaneous.

The Heaviside Flow over a wire in an electrical circuit has no mass but is slowed down in a closed loop circuit because of electron current. The Heaviside Flow or pure VOLTAGE POTENTIAL can be manipulated to flow in IMPULSES without ever reversing polarity or closing the loop so that no electron current is induced into movement to resist it.

Therefore, impulses of this massless potential are instantaneously propagated where it is going. That is a longitudinal impulse instead of a transverse wave. That is superluminal travel for energy flows. This can be and is actually applied in exotic energy devices, which we will explore in the next chapter.

Anything with mass will have resistance to Aether moving through it. But, what if you were able to shield the mass in a way that the external Aether won't pass through it so there is no resistance to movement? Therefore, there will be no inertia? Or, the material can be made so that the Aether more easily slips through it with less resistance.

For example, an aluminum sphere will have a certain weight on Earth because of the resistance to the Aether. The metal is non-ferrous or non-magnetic and the atomic matrix is very scattered. If the sphere is pumped with high frequency microwaves, for example, or anything that will speed up the spin of the electrons and

pump it off and on, the atoms will polarize and the Aether will slip through the aluminum with less resistance. This means the sphere will weigh less¹².

If we are inside a spaceship traveling at high speeds, we will experience inertia. This is what we don't want. So, it makes sense to shield the whole vessel.

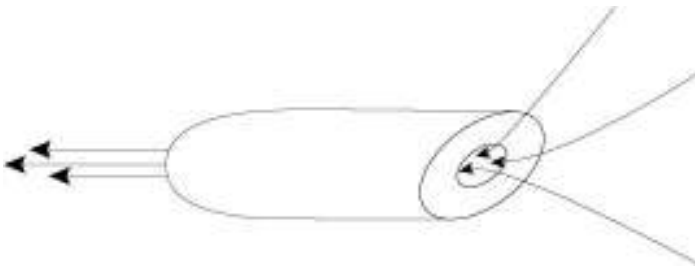

Figure 9.1 A Ship With Aether Valve

What about a ship such as the one illustrated above with a valve through the center that sucks the Aether into it and out the back diverting it away from the material of the ship? This concept is shown in the illustration above.

Possibly, very high voltage potential differences in a "valve" going through the shell of the ship will cause the Aether to be attracted into that valve rather than letting the Aether

¹² [Alzofon, Fredrick. Electric Spacecraft Journal, Issue #13, "The Alzofon Papers: Gravity Control; Experimental Investigation of an Electromagnetic-Gravitational Interaction; Electric Propulsion/Antigravity; Charged Barrier Technology."](#)

move through the mass of the body of the ship itself.

What about a ship that diverts the Aether around the outside of it? This is my personal favorite and is illustrated below.

Figure 9.2 Ship Slipping through Aether

If a dipole has the potential to move different charges of the Aether, then perhaps a high voltage + and - on different parts of the ship would cause the Aether around it to be diverted around it to create asymmetrical movement. The polarities could probably be moved around to cause up/down, left/right, and forwards/backwards movement.

If the poles were high enough voltage, it could cause so much of the Aether to be attracted directionally over the shell of the body that it literally slips through space without having the Aether move through the material of the ship, meaning there is no inertia. If there is no inertia, there can be infinite speeds easily surpassing the speed of light since resistance to movement isn't an issue.

I believe this concept is the most practical way for high-speed interstellar travel beyond the speed of light without inertia. Also, if there is no increase in mass on or in the ship because of no inertia or resistance to the Aether, there will be no time dilation effect.

Therefore, you can go to the next star system in the blink of an eye and come back in the blink of an eye and you will have aged at the same rate as your Earthly counterparts. Your clock would tick as if you were standing still.

The only Aether you will be interacting with is the “ambient” Aether inside the ship. And most probably, those standing on Earth will age less than you since they have gravity. If you were in the ship, there would be less gravity and your clock would probably tick a tad bit faster. You wouldn’t feel yourself move. As a matter of probable fact, you technically are going to the next star system without moving an inch since you’re not moving through Aether-filled space but rather you are moving through Aether-less “space” lacking any real distance.

Movement is the result of moving through space with Aether, which has a distance component. If you literally slipped through the space, having the Aether around you squeezing you along, you are not moving through time and space. Your ship would be still and the universe

with time and space would be slipping past and around you.

Ultimately, I believe that either the power source or the method to control a vehicle like this will be fully powered and controlled by mind power and nervous system connection alone where the ship would be an extension of the pilot¹³. That will be the ultimate evolution of a vehicle that can travel through time and space without inertia.

I believe these technologies already exist and are in use right now as well as being reserved for a later time. Credible witnesses have already come forward testifying to the existence of these technologies¹⁴.

Also, it appears from different sources that General James L. Jones, Jr., USMC (Ret.) may work with President Obama to declassify anti-gravity technologies. Obama already signed this:

http://www.whitehouse.gov/the_press_office/TransparencyandOpenGovernment/

I think there are visitors from other places traveling by similar means as I think it is preposterous for us humans to naively believe we are the only intelligent beings who exist. Perhaps future humans are coming back to

¹³ <http://www.energeticforum.com/2132-post3.html> and <http://web.archive.org/web/19980429142017/accpc.com/nnfaq/>

¹⁴ <http://www.disclosureproject.org/aboutexccsumm.htm>

prevent the destruction that mankind seems to be so adept at.

This method of propulsion through time and space is a form of time travel in essence. The whole subject of Time Travel would fill many volumes.

Let's get to some practical applications that we can put our hands on right now.

Practical Application

“Let the future tell the truth, and evaluate each one according to his work and accomplishments. The present is theirs; the future, for which I have really worked, is mine.” – Nikola Tesla

So what in the world can we do with all this information? We can build more efficient energy devices, directly engineer consciousness, travel to the other side of the universe while keeping the same time as your friends and family on Earth, amongst other paradigm-shattering concepts.

Maybe if we have enough people visualizing a simple, seamless concept that links the quantum to the large scale, it would resonate in the collective unconsciousness strongly enough that we could make a quantum leap in our perception of reality and the universe in a way that empowers us instead of keeping us locked in a small box. What if this triggered something within us that let us learn more about who we really are as human beings?

What practical technologies can be had out of understanding potential and what it really is, and also how our consciousness interacts with it? What about understanding what thoughts are and what about going even further and actually engineering thoughts? What about cranking up the potential of our thoughts so powerfully that our desires are manifested in very profound ways and even instantaneously?

That would take concepts such as the *Law of Attraction*¹⁵ (LOA) to the next level. Actually, it would take it quantum leaps ahead of where the concept is now in the general understanding.

It has been thought that someday, a person may be able to download an entire PhD worth of knowledge into their mind instantaneously. We may still be a bit away from that kind of application. However, there are some interesting technologies available and in development that seem to be the precursor to those very wild and far out applications.

If you ever saw the movie *The Matrix*¹⁶, you undoubtedly remember the part when Neo downloads kung fu to his mind. There is one particular technology that appears to be the most powerful and advanced mind empowerment technology in the world and it is the closest

¹⁵ [Murakami, Aaron. *Secret of Law of Attraction*](#)

¹⁶ [The Matrix](#)

thing to that technology in *The Matrix* that many people have ever seen. It is *PATHS ~ Mind Energetics*¹⁷ (<http://www.PATHS-123.com>).

This one particular technology seems to make most self-hypnosis, affirmation, subliminal soundtracks and other similar technologies obsolete in one fell swoop.

I still believe that simple brainwave entrainment and brain hemisphere synchronization soundtracks are very powerful tools. They stimulate whole brain thinking while helping to build a more balanced neural network. Using these tools together with an advanced consciousness technology may be the ultimate combination.

Imagine sitting in front of a computer screen for three minutes and having millions upon millions of instructions directly transferred to your subconscious mind. Over the course of about seven days, the brain will form connections corresponding to these instructions.

It is a form of engineering thoughts that your subconscious mind soaks up like a sponge. The subconscious mind, brain and nervous system network is forced to use more of the photon potential available to it.

¹⁷ [PATHS ~ Mind Energetics](http://www.PATHS-123.com)

The technology that *PATHS* is based on is called *RDT Generation II*¹⁸ (Rapid Data Transfer).

When each thought has more potential behind it, the thought power that is sent into the collective mind is much more powerful. This can help trigger profound personal transformation as well as helping you attract your desires through the collective in a stronger fashion.

Imagine receiving instructions to increase muscle mass and in a few hours to a few days your muscles are burning without ever doing exercise. Your mind is perfectly capable of sending signals to your muscles to contract and relax them at a subtle level that you don't even notice, but the effects are cumulative. Soon, you are actually increasing measurable muscle mass.

In an early test, five people watched a computer screen and had no idea what to expect. There was nothing to suggest anything to them. They watched the screen for three minutes. After about four to five days, four out of five of them were several shades darker. What happened?

Their subconscious mind was instructed to increase melanin production in the skin by 25-30%. They did not know what to expect, their skin became darker and that is what the instructions were telling the subconscious mind

¹⁸ [RDT Generation II](#)

to do. This rules out placebo 100% beyond a shadow of a doubt.

Another example deals with diabetes, which affects millions of people. It is known that diabetes is *not* an autoimmune disease but a nervous system condition¹⁹. The beta cells that produce insulin in the pancreas are surrounded by a lot of nerve endings. If the nerve endings are not properly secreting Substance P, which is a neurotransmitter involved with transmitting pain signals to the brain, the beta cells will not produce insulin properly.

What causes the malfunction of the nerves to begin with? Most likely inflammation, dangerous ingredients like high fructose corn syrup, and other related additives and sweeteners.

If the nerve endings in the pancreas start to properly secrete Substance P, the beta cells will start to produce insulin properly and also the insulin receptors start to take up insulin. This can potentially *cure* diabetes.

This type of mind technology works because a team of researchers has discovered an analog of the *Universal Language*. It is the language of consciousness itself and it isn't based on any literal language. It is PRE-LANGUAGE.

¹⁹ Dr. Dosch & Dr. Salter, Diabetes Breakthrough, Toronto scientists cure disease in mice, 15 Dec 2006

Instructions in this language can be sent to the subconscious mind to instruct the nerve endings in the pancreas to increase Substance P secretion. When the nerves respond, the blood sugar starts to stabilize, less insulin is needed and quite possibly insulin injections are never needed again.

This kind of application has the potential to revolutionize the healing, educational, sports, self-help, and other fields in a very profound way.

Imagine rapidly internalizing the concepts in the book *Think & Grow Rich* in only three minutes per week? Then, automatically become the embodiment of the concepts in that book without ever having to read a word.

The implications for this sort of technology are absolutely profound. Based on the nature of the technology, it is really a *Spiritual Technology*.

It has been said that the mind is the final frontier. It looks like we are definitely on a journey to learn more about it at a deeper level than ever before.

In a future project, I'll guide you through a journey of the mind, the genesis of our thinking self, how thoughts form and direct the quantum potential to create reality as we know it and also how various technologies may help boost the potential of the human mind. We will

also explore a very simple model of what synchronicity actually is and how to cause it to happen at will for our benefit.

I want to give you a gift so that you can become a part of the solution in helping this planet. It doesn't cost anything and you can use it as many times as you want.

Remember when I told you about the Matrix-type mind power technology? Well, you can use it for free. Just visit http://www.paths-123.com/products_show/69/Project1World_Team.html and signup. Don't worry; you won't even have to enter a credit card number.

At the time of this writing, the project deals with using collective intention to help increase **GLOBAL PEACE!** It is a fun way to see how the PATHS technology works. Make sure to read the RDT Generation II document that I referenced.

If you are someone who believes you have to leave this world in a better shape for your loved ones, your children, your grandchildren and others, then you realize that with knowledge and understanding there is responsibility. You can't afford not to do it!

So, now that you know about it, what are you going to do?

11

Aetheric Energy Machines

“Throughout space there is energy. Is this energy static or kinetic! If static our hopes are in vain; if kinetic — and this we know it is, for certain — then it is a mere question of time when men will succeed in attaching their machinery to the very wheelwork of nature.” – Nikola Tesla

This chapter is dedicated to all the contributing members that post on the Renewable Energy forum at Energetic Forum here: <http://www.energeticforum.com/renewable-energy/>

What if something could actually be built with currently existing parts that uses some of the concepts in this book that just might do this world some good? This could happen right here and right now.

I wouldn't consider this type of technology necessarily difficult to understand but rather they are just *different* from all the mainstream scientific quackery.

Imagine taking advantage of open system concepts in an electromagnetic device that gives

you a gain in electrical work. Yes, a gain. It doesn't violate laws of physics and it isn't over 100% efficient but the output far exceeds the input that the operator has to supply, which as explained earlier is greater than 1.0 COP.

I'll break this chapter down into different sections based on the inventor, developer or researcher so that it is a little easier to follow.

This chapter is not a how-to manual. Instead it is a showcase displaying many powerful technologies that the general population would never even know about. I have hands on experience with most of them so I'm not just talking about a lot of what ifs.

Even though this is not a manual, I give you EVERY source to go directly to the information so you can see all the open source projects in live time. You will have access to the schematics, people working on them, results being displayed, video clips, etc...

If you know anyone that believes in conservation, green energy technologies, or saving the environment and you believe that they could appreciate an understanding of what open systems are about, please send them to www.thequantumkey.com.

The technologies highlighted in this chapter deserve to be known by the whole world. In the next chapter, I'll show you how you can help yourself by helping me get the

word out. Until then, please enjoy some of the fascinating and profound technologies highlighted just for you!

NOTE: I make references to some things in this chapter that require the knowledge of what I'm referring to. I give you the sources to find all of it out and you can use the information in conjunction with this chapter. Even if you are unaware of what I'm referring to, simply look at the concept of what the technology is about.

John Bedini

World's Most Efficient Battery Charging Technology

One of my personal favorites is John Bedini's²⁰ "radiant energy" circuits and more specifically his "inverted circuits" that take advantage of pure negative energy (dark energy), which is negentropic and can actually be tapped right on a desktop with off the shelf parts.

The implications of John Bedini's circuits are very profound. I highly recommend getting the book *Free Energy Generation*²¹ by Tom Bearden and John Bedini. It is more than worth its weight in gold. Bedini's circuits will eliminate millions upon millions of batteries from the landfill.

John's chargers rejuvenate a good percentage of "dead" batteries left for the scrap heap into a strong usable condition and it isn't a rare thing for them to actually power a load longer and stronger than if the battery was brand new!

Also, imagine the lifespan of batteries in an electric car or solar powered home with a battery bank that outlast the car or home! How

²⁰ [John Bedini](#)

²¹ [T.E. Bearden, Free Energy Generation – 20 Bedini-Bearden Years, 2006](#)

much battery-powered drill, screwdriver, mobile phone, wireless landline phone, toy and other batteries do you throw away every year because they won't hold a charge? What if that wasteful activity was virtually eliminated?

There isn't enough wasted electron current to produce heat in the battery when charged with John's method, so they stay cold. This charge lasts longer than a charge with hot electron current.

Figure 11.1 My First "School Girl Motor"

The above picture is the first "school girl" motor I built based on John's schematics. It is known as the "school girl" motor because a ten-year-old girl built one and won the top prize in her school's science fair.

This motor ran for hours and hours for about a week without killing the battery and none of the teachers could figure out how this could be²². It is an incredible learning tool and this one is what kicked in my burning obsession with these technologies.

That science fair motor isn't meant to charge batteries but the circuit's concept is the foundation for the chargers. If you want to learn how to build this energizer, then you really need to visit the following discussion threads and these specific posts to get you started:

Discussion - <http://www.energeticforum.com/renewable-energy/365-bedini-schoolgirl.html>

Schematics - <http://www.energeticforum.com/1537-post2.html>

Description - <http://www.energeticforum.com/1551-post4.html>

Youtube Video – <http://www.youtube.com/watch?v=GbPOF5iX-AA>

You can build a bare basic model for about \$20. I used a pink wheel from a \$2 pair of roller-skates from the Goodwill so no excuses!

²² [Manning, Jeanne. Atlantis Rising #25, "The Attractions of Magnetism."](#)

You can build a model that takes the output from this simple energizer and charge capacitors with it. These capacitors can then be discharged to batteries that need charging.

When these batteries are charged like this, they will revitalize and will power a load longer and stronger and will even recharge quicker and quicker than normal hot current charging.

Here's the original "Dual Battery Charger." I built this with my friend Jeff Moe.

Figure 11.2 Dual Battery Charger

Another variation of this one that I made was by taking a ten-speed rim and turning it into the rotor. That is quite a bit bigger than this little couple inch rotor. The coil was also monstrous compared to the one above with proportionate results to follow!

Figure 11.3 Big Dual Battery Charger

I made a pulley with a roll of tape pressed between two plastic round pieces and a rubber

band. Money doesn't have to be an excuse! Be creative and you can do wonders with very little.

Imagine this... With this big one, I could charge some pretty large capacitors. I could discharge these capacitors to some dead batteries for about an hour or two. If power was disconnected, the batteries I was charging continued to climb in voltage for almost another hour without any further input!

It wasn't just some goofy effect either! I could actually light bulbs with that free charge and even drove a scooter with it to John's when his shop was down the street from my company.

The following picture is a modified Sony Capstan motor from a reel-to-reel. It has two power coils and two trigger coils. When I run it, the power draw is 1000 miliamps at 5000 rpm. Then it keeps speeding up and the power draw drops down to 200 miliamps at 10,000 rpm. So, at twice the speed it draws 20% of what it did! Also, the output goes UP as the speed goes up and I can charge batteries from the output.

This used to be one of the most watched motor videos on the Internet before it was taken down from the original account I had:

<http://www.youtube.com/watch?v=DzevONEsdxQ>

Figure 11.4 Capstan Motor

Are you starting to get the idea that you are dealing with some very advanced technologies here that you can actually replicate? I hope so!

If you were driving an electric car, how would you want your batteries charged? With all the “high tech” chargers that are usually available that are based on antiquated technology or with Bedini technology? I already know what common sense says but everyone else has to make his or her own decisions.

There are other variations that I won't touch on at this moment. Much of this material is already online in Energetic Forum.

Below is a solid-state version. That means that there aren't any moving parts. The coil just turns off and on because the circuit is designed to do that instead of having a magnet on a rotor

act as a switch. It can get to a lot higher frequencies and can do different things.

Figure 11.5 Negative Energy Oscillator

The above picture is a self-oscillating negative energy transformer filling a capacitor with the *voltage potential*, which lacks any real electron current and is being rapidly discharged from the capacitor to dead batteries.

The batteries being charged stay stone cold because there is little to no electron current. There is a net gain in work that can be had from batteries being charged compared to the work in joules that left the input battery.

Discussion - <http://www.energeticforum.com/renewable-energy/366-bedini-solid-state-oscillators.html>

Schematics - <http://www.energeticforum.com/4023-post7.html>

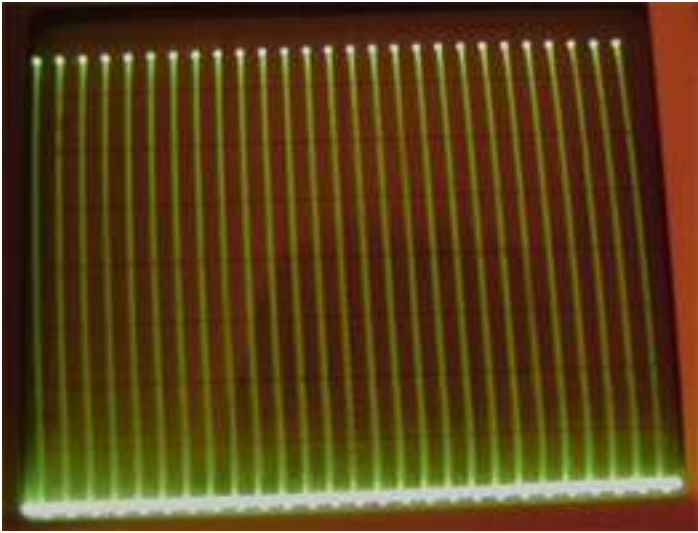

Figure 11.6 Scope Shot of Voltage Potential

The above picture is what my solid-state (no moving parts) oscillator produced. The picture is inverted so the long vertical line spikes on top are the output and the small stubs at the bottom are the input. I put in about 13-14 volts and when the system is shut off, all that work that went into it in that brief moment of time is compressed even further by the collapsing magnetic field into a smaller unit of time and converts it back into pure voltage potential. It also sucks in extra vacuum energy with it that adds to the system. The collapse of the magnetic field compresses all the work that was expended over time and this is what turns it back into

potential. Those output voltage potential spikes are about 440 volts from only 13-14 volts input!

Many electrical engineers will claim that that is easy to do and all you need is a “step-up transformer.” That means there are two windings. One has smaller turns where you put in the low voltage and the second winding has more turns so there will be more voltage coming out of it. Well, this coil is 1:1 meaning there are the identical amount of turns on the output winding as the input winding!

Anyway, there is virtually no left and right width to each spike, meaning that there is virtually no time component to it. If there is no time per impulse, there isn't enough time for electrons to be induced into movement. If there is no time, there can be no wattage, which is work. It is thought that the electrons move very fast but in reality, the electron movement over a wire is only a few inches per hour.

Since those spikes are only the voltage potential part of “electricity” without the electron current, a battery being charged with this cannot get hot since there is no resistance.

An interesting point is that when this potential moves over the wire without electrons resisting it, it is faster than the speed of light. These are known as longitudinal impulses instead of transverse waves. They are virtually instantaneously propagated to their destination

without taking time to get there. This is the beauty of working with *pure potential*.

For example, imagine two people holding each end of a rope. One person whips the rope towards the other person, a wave will travel down the rope taking time to get there and losing energy on its way. That is a wave. Imagine both people are pulling the rope very taut with no slack in it. Then, imagine one person tugs on the rope. The tug of the rope is felt on the other end instantaneously and didn't take time like the wave did to get to the destination; it was instantaneously there without losing energy over time. That would be what the impulses are like.

It is interesting to point out that a capacitor can and does charge up quite nicely with nothing but pure voltage potential impulses and no real electron current.

It is thought a capacitor charges only from potential difference at the terminals because electrons are piling on plates in the capacitor. This may not be the case.

When the capacitor is charged with pure voltage potential, I have a little electronic circuit that discharges that potential into a dead battery and it charges it up just fine. Also, it powers much longer and stronger than if it were charged with hot electron current, which degrades the battery over time.

I do not pulse the positive terminal of the capacitor to the dead battery's positive terminal. Instead, I leave the positive terminal connected and pulse the negative side of the capacitor to the negative terminal of the battery. It is not within the scope of this book to explain how this is different but it takes advantage of negative energy that is time reversed, and negentropic (opposite of something with entropy) or self-ordering.

However, if you look at Figure 1.2, you will see that in addition to the anti-photon potential moving from the negative terminal towards the positive terminal, there is more anti-photon potential that is moving *towards* the circuit where there is resistance.

At the same time, the positive photon potential dissipates outwards from that point of resistance leaving the circuit. When the potential is discharged in an impulse, there is more negative potential coming into the circuit than positive potential leaving it. That is how more potential winds up in the batteries being charged compared to what left the input battery.

Earlier, I covered what electricity is. The positive energy components will dissipate when it hits any resistance, which is entropy.

When using the negative component, which is literally time-reversed energy, any resistance causes more negative energy from the

vacuum potential to be drawn *towards* those resistances instead of away from them. That is where the extra energy comes from. It is negentropic energy, which does the opposite of positive dissipative energy.

Now check this out; I have used that identical coil with a connection to the Earth. Without any batteries on the entire circuit and only capacitors, I have succeeded in allowing the circuit to self-run with no further input. It self-sustains²³.

It runs on a capacitor and charges a capacitor. The capacitor being charged sends its potential to the input capacitor. While connected to the Earth with a rod, it sucks the radiant potential from the Earth and adds it to the system. It just runs and runs without dying.

It is possible that it could stop running and that would depend on what is available from the Earth and from gravity. Energy coming into the Earth from above comes in waves and pulses. Sometimes it is strong and sometimes it is weak.

It is mostly to demonstrate the principles that an open system can have environmental energy come into it to keep it running. There isn't enough in this system to do anything practical but what it does show is everything the textbooks say can't be done!

²³ http://www.youtube.com/watch?v=yDtXR_1Ubs8

Please understand that every fiber of our being also has a counter-twin in the matrix. Every movement you make has a counter movement.

Anyway, what you now have your hands on is the answer to what is the most efficient way in the world to charge batteries. You also know how to keep batteries out of the landfill. You also now know how to do this in a way that is supposed to be impossible according to conventional physics and conventional electrical engineering.

The potential charging technology of John Bedini is quite profound and I hope that you can see the implications of what is possible. Drive 300 miles on a charge instead of 150. That is quite possible! Also, just realize that most people don't know how to revitalize dead lead acid batteries and this technology does it better than any other!

Bob Teal Magnipulsion High Torque for Low Power

Here is something any conventional thinking electric motor designer and experimenter “should” wrap their head around; it is Bob Teal’s Magnipulsion Engine²⁴.

Figure 11.7 Bob Teal’s Magnipulsion Engine

Figure 11.6 is from a television interview²⁵, back in the 1970’s, of Bob Teal explaining this electric motor that exhibits some

²⁴ Bob Teal U.S. Patent numbers 4,024,421 & 4,093,880

²⁵ [Bob Teal Archive](#)

properties that are not explained in any of his patents.

This rare clip from my archives was given to me by my friend Lawrence Kennedy.

Bob Teal Interview – <http://www.youtube.com/watch?v=aj7oD8JG5xU>

His motor had no counter electromotive force (CEMF) otherwise known as “back EMF” or “back resistance.” In addition to this, it could recycle some of its electrical energy to light bulbs. Also, it produced useful mechanical torque and it didn’t take as much energy to do this compared to a conventional induction motor based on magnets and coils.

It is an *attraction motor* with unique geometry. When the coils charge, an iron rod is attracted into a coil like a solenoid. The rods are connected to a crankshaft that spins a rotor. When the rods are almost in the center of the coil, the coils are switched off.

The coils have two windings that are shorted into each other. This has interesting effects that deserve further study.

When the magnetic fields collapse, this further sucks the rod in the coil producing more mechanical work in the forward direction when the power is turned off. Imagine getting

mechanical work from something by turning the power off!

Peter Lindemann Lindemann Rotary Attraction Motor

Peter Lindemann²⁶, a leading energy researcher, released a DVD called *Electric Motor Secrets*²⁷ covering the possibilities of what Bob Teal was doing in his Magnipulsion Engine. The DVD has simple explanations that any electrical engineer should be able to understand.

You will also learn about Peter's design, the *Lindemann Rotary Attraction Motor*. It is based on some of the fundamentals of Bob Teal's motor.

If you watch the video that I point out, the power input goes down when you use the output to light a bulb! Imagine drawing less power while doing more work! I hope it is sinking in.

There is a member in Energetic Forum, Jetijs, that has taken this further than anyone else that I know of. I'd recommend following his work if you were interested in this concept and pay attention to anything he recommends. You can find him in the Electric Motor Secrets discussion thread.

Tay Hee Han

Electrostatic Separation of Water

There is virtually nothing known about this mysterious Tay Hee Han except for a patent that he has. It is US Patent # 4427512²⁸ by Tay-Hee Han, "Water decomposition method and device using ionization by collision."

Most school kids learn about electrolysis, which is about running electron current through water and stripping the covalent bonds from the H & O so that the gases separate.

It is very inefficient to get hydrogen from water this way and there is a "law" known as the Faraday's Law of Electrolysis that states you can get so much gas freed up for a certain amount of input.

Well, that is based on current. What about separating water by just high voltage potential without current flowing through the water? That is the basic concept covered by Tay Hee Han's patent.

There are several patents based on this concept and plenty of replications based on other variations were the gas output exceeded Faraday's Law of Electrolysis.

²⁸ <http://www.wikipatents.com/4427512.html>

This is not perpetual motion and this doesn't violate any laws. Faraday's law applies only to current electrolysis. Electrostatic separation of water is a totally different game altogether.

If you're interested in real solutions dealing with hydrogen technology, this is one that deserves a closer look.

As a hint, pay close attention to the material used, which is barium titanate. It has the required properties to get the results that Tay Hee Han got according to a trusted source.

Stan Meyer Water Fuel Cell Water Powered Car

What if you could power an entire car on tap water alone? This can also be done with very little power according to certain theories.

Figure 11.9 Water Fuel Cell

Figure 11.5 is a water cell based on Stanley Meyer's concept using concentric tubes to make water gas instead of flat plates²⁹.

²⁹ Stanley A. Meyer, Gas Generator Voltage Control Circuit, US Patent 4,798,661

Here are some videos: <http://www.youtube.com/watch?v=VphxVYYnEvA>
<http://www.youtube.com/watch?v=Yiag4h7H-TQ>
<http://www.youtube.com/watch?v=2VLYufVSJL8>

When fully reverse-engineered, it will allow anyone to drive a vehicle on nothing but pure tap water just like what Stanley Meyer did.

There is more misinformation about this particular technology on the Internet than most other technologies combined. If you decide to pursue this as a project, please do so at your own risk of wasting more of your time.

The picture shows a cell made from a pasta jar with T-304 stainless steel concentric tubes with 1mm spacing in between the tubes. There are voltage potential impulses going to the tubes with almost no current causing a massive amount of gas to be produced from simple tap water that doesn't even have any added electrolytes. The water cell stays cold.

The secret is to hit the tubes or plates with high voltage electrostatic potential while preventing any current from conducting. The electrostatic stress on the water causes the oxygen to become more negatively charged and the hydrogen to become more positively charged. Therefore, the oxygen repels the bonding electron and the hydrogen attracts the bonding electron. This overcomes the covalent

and electrostatic attraction strength of the bonding and causes the atoms in the water molecule to fall apart without any current moving through the water.

It is important to insulate the inner and outer tube setup with plastic or other insulator to lock in the potential. Otherwise, it will be a leaky capacitor that can't build up much voltage potential. I didn't do this in my videos but would be the next logical step in my opinion.

With the development of Bedini's technology, I believe that for the first time, we could probably produce water gas with negative energy with the highest amount of production for minimum amount of input by the operator.

This is not electrolysis with straight electron current, but rather voltage potential produced water gas just like Tay Hee Han's cell. Therefore, Faraday's Law of Electrolysis is absolutely irrelevant. This law dictates that only a certain amount of gas can be had from electrolyzing water with current.

There are many components to this technology such generating steam and separating gases from it, and even eventually developing an injector system the size of a spark plug that injects the water and/or water gas and ignites it with plasma.

That brings us to the next technology, which is probably one of the most important

open source technology projects in the entire world in the field of energy.

Gotoluc Water Spark Plug Plasma Ignition System

If you want to talk about the cat being let out of the bag in a big way, this is it. The reason I say that is because it opens up *Pandora's Box* to the understanding of many natural principles that appear to be seriously suppressed and taboo!

There have been plasma ignition patents issued in the past but it wasn't until Gotoluc, a member at Energetic Forum, stumbled upon a simple but profound concept with ignition circuits when he was trying to understand another waterpower technology for running cars.

A Common modification to an ignition coil is to add on a CDI (capacitive discharge ignition) module so that instead of 12 volts being dumped into the ignition coil, it is a few hundred volts. There is a corresponding increase in the output meaning there is a stronger spark to burn more fuel.

CDI's are proven, have been around for ages, and are used extensively in racing on and off road and even by people that aren't using it for racing applications.

Imagine by placing one single diode (an electrical component that is essentially a one way valve for voltage) between two connections and increasing the size of your spark by about 100 times with no extra input! Wait until you see what it does with booster capacitors on the plug!

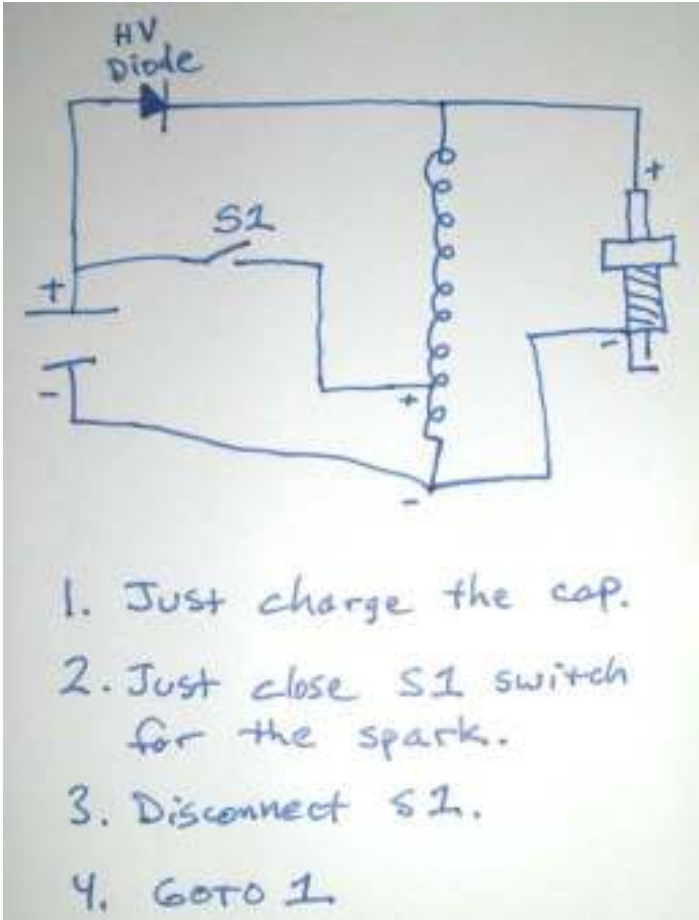

Figure 11.10 Water Spark Plug Circuit

A very profound thing about this plasma spark is that by misting regular tap water on it, it explodes on contact with tremendous force! I'm not talking about subjecting the plasma flame to hydrogen gas separated from water; I'm taking about spraying plain ol' tap water on the spark plug gas when the circuit is running!

The plasma bursts are extremely loud and bright; it will make you deaf and blind without hearing or vision protection – you have been warned – this is not a joke!

The above schematic is the very bare bones concept. If you don't have experience with any kind of high voltage applications, please don't even think about working with this.

The capacitor here can be roughly 5-50uf's and a few hundred volts. The HV diode can be a microwave diode around 15kv. Any standard ignition coil will work. For the spark plug, it is necessary to use plugs that do NOT have a resistor in them. A simple rule of thumb is that if the spark plug part number has an R in it, then it has a resistor. If it does not have an R, then it does not have a resistor in it.

The schematic I show is simple. Charge the cap, close the switch and that discharges the cap into the primary of the ignition coil. With the diode placement like that, the HV output seeks ground through the diode – YES, with the diode

like that, diode instantly shuts off and the only path left is over the gap – the higher resistance path.

What happens as Greg, “gmeast” in Energetic Forum has shown, is that this effect causes the capacitor to discharge MUCH FASTER. About 80 of the capacitor discharges INSTANTANEOUSLY. What happens when you discharge a certain amount of potential in a smaller and smaller time frame? The real energy you wind up with gets bigger and bigger! That is time compression at its finest – IMPULSE technology.

The gain is so great that you’ll get a bright white ball of plasma that explodes tap water on contact.

Figure 11.11 Plasma Ignition Lawnmower

Here is one experimental system Peter Lindemann and I put together. We disabled the stock magneto ignition and put a reed switch so that we can adjust the timing as needed. The reed switch triggers an SCR to discharge the capacitors into the ignition coil at the right time. You can see the big black microwave diode going from the primary of the ignition coil to the HV output.

It ran great, the exhaust temp dropped and when we screwed in the gas jet as far as it would go, we just couldn't stall the engine no matter what! When the mixture was that lean, we opened up the throttle and it just wanted to scream!

An upgrade to this circuit is to add a "booster cap" to the circuit. Simply, that means to add an extra capacitor in parallel across the spark plug. It needs to be charged from a separate source.

The cap may be a few hundred volts or higher. Normally, that voltage cannot jump the gap on a spark plug. However, when the HV from the ignition coil goes across the gap, the capacitor in parallel will have a conductive pathway to jump the gap. The mixing or smashing of these two potentials cause a seriously cranked up plasma explosion!

Figure 11.12 Booster Cap Plasma Ejection

The above picture shows a common sparkplug with the water sparkplug circuit with a booster cap added. When I sprayed water on it and cranked it up, the plasma bursts were so powerful that the “Lorentz Force,” a magnetic field produced, ejected the plasma clean off the plug. Compare that to a regular spark on a plug or even the most souped up CDI system in the world. I think you’ll have to agree that nothing compares.

For THE discussion and latest on this most amazing open source technology project, make sure to pay attention to Greg “gmeast” at Energetic Forum. He took this further than

anyone else so far as practical applications go. He achieved 43% increase in gas mileage on an old VW Bug with the plasma ignition system and steam injection that was generated by dripping water on his exhaust manifold – it was ducted into his intake.

At the time of this writing this, he is testing this system with the most advanced sparkplugs in the world. He will report his progress in the discussion thread.

The plugs are replications of Robert Krupa's Firestorm³⁰ plugs that have shown to run a car on 40:1 air/fuel ratio. It would be expected to run hot, but it dropped temperature like mad and had a 70% increase in gas mileage.

Imhotep Radiant Oscillator

Many people are familiar with compact fluorescent bulbs as being an efficient alternative to incandescent lights.

This is true to a point but what if you could light these fluorescents with a fraction of the power that the manufacturers make you use to light them? Obviously, that would take lighting efficiency to a whole new level that nobody is talking about.

Figure 11.13 Powered by Imhotep's Oscillator

Imhotep is a member at Energetic Forum and discovered a unique way to use a typical

relay as an oscillator that has some serious radiant energy output. When hooking a compact fluorescent light tube (stripped of the factory built in ballast and circuit) to this output, it lights up with a fraction of the power that the built in ballasts draw.

Also, light bulbs lit with radiant energy are much more whiter and brighter than when they are lit with conventional “electricity.”

Here are a few discussions on Imhotep’s circuits:

<http://www.energeticforum.com/renewable-energy/2255-imhoteps-radiant-oscillator-video.html>

<http://www.energeticforum.com/renewable-energy/2003-free-energy-last-step-step-must-see.html>

Member – Aromaz found a simple way to oscillate the ignition coils solid state with just a few transistors:

E.V. Gray (Edwin Gray) Gray Tube Cold Electricity Originator: Marvin Cole

Ed Gray's technology known as the Gray Tube and Gray Motor is one of the most popular "White Elephant's" that people have been chasing for about 8 years now.

It involves mixing electrostatic potential with direct current, which powerfully charge magnetic coils for the purpose of running an electric motor. The circuit stays cold and doesn't generate heat and the horsepower output is many times more than what can be accounted for by the power supply input batteries.

Gray's electro-magnetic association (EMA) motor is not perpetual motion or any mystery, he stressed, but rather a unique blending of three known forces to make energy.

"Using static electricity isn't new, neither is recycling power or activating electromagnets, but Ed Gray simply became the first to put all three together with the right combination," Richard Hackenberger, his aide, told TATTLER.

Whether it's driving a car or generating power, the EMA system works the same.

The motor draws small amounts of direct current from a battery and blends it with static electricity to make the static "work."

The static charge then activates the electromagnets, the engineer explained.

Figure 11.14 Gray Motor Article Excerpt

The article says: “Using static electricity isn’t new, neither is recycling power or activating electromagnets but Ed Gray simply became the first to put all three together with the right combination... *The motor draws small amounts of direct current from a battery and blends it with static electricity to make the static ‘work.’ The static charge then activates the electromagnets...*”

In the water spark plug circuit, the high voltage came from an ignition coil and the low voltage source came from a lower voltage capacitor. They are collided into each other and are forced to a common ground.

Figure 11.15 My Tube Replication

Above is a bare bones replication attempt of the conversion tube that acted as a special switch to mix the electrostatic potential (capacitor and/or ignition coil) with DC current (from a battery).

The static referred to is high voltage electrostatics or high voltage charges with very little to no current. The source of the electrostatic potential here is the power supply source (ignition coil) and/or high voltage capacitors.

Normally, high voltage spikes really don't do much on their own because by their nature, they are potential. The direct current is the battery on the low voltage side of the tube and/or the battery on the backside of the load if a capacitor isn't there.

It is my opinion that the concept of this powerful cold charge is identical in concept to the water sparkplug technology. It is colliding a high voltage and low voltage potential together and forcing them to a common ground. This is an educated guess coupled with hands on experimentation.

When I first learned of this technology, John Bedini suggested I read Peter's book [Free Energy Secrets of Cold Electricity](#) and Gerry Vassilatos' book [Secrets of Cold War Technology](#).

Peter Lindemann's book, *Free Energy Secrets of Cold Electricity*, was responsible for placing the awareness of this technology into the minds of thousands of people around the world that have an interest in free energy technologies.

It documents the history, patents, published newspaper articles about the motor,

and other information showing connections of the technology to Tesla's technologies.

For reference, here are the US Patent #'s relating to the "Gray Tube" and "Gray Motor."

3,890,548 - 4,595,975 - 4,661,747

Over the last few years, Mark McKay, a local researcher from Spokane, Washington has extensively documented Gray's life, work, relationships, and has interviewed many of Gray's family members. He has posted some of this information in our discussion forum here:

<http://www.energeticforum.com/renewable-energy/3235-gray-tube-replication.html>

Peter Lindemann has a compilation of information pertaining to Gray here:

<http://www.free-energy.ws/edwin-gray.html>

Gray Tube Replication Discussion Thread -

<http://www.energeticforum.com/renewable-energy/3235-gray-tube-replication.html>

Must see videos:

<http://www.youtube.com/watch?v=8y0921zaPxQ>

<http://www.youtube.com/watch?v=azfxP9IBAAo>

Here is the green/white color that seems to show up only when the mixing occurs with an

inductor. Without an inductor, it is the super white plasma burst.

Figure 11.16 Green-White Plasma Burst

Here is a schematic that represents the simplest way I can show anyone how to get the effect of the blending of high voltage and low voltage with current and forcing them to a common ground with an inductive load in series with the discharge.

Simply, if you're familiar with the Water Spark Plug circuit, try putting a coil in between the diode and the booster capacitor. When the

front side cap is discharged into the ignition coil, the coil will pulse.

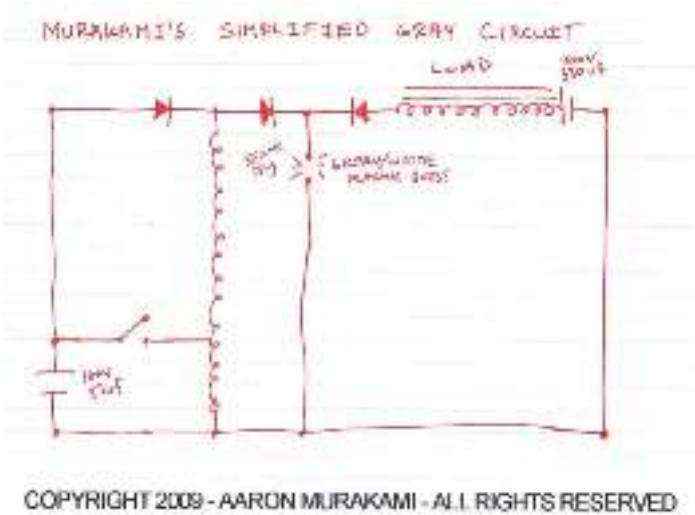

Figure 11.17 Murakami Simplified Gray Circuit

The booster cap is analogous to the LV source and the ignition coil is the HV source.

What I have presented is what I believe to be the operating principle of the Gray Tube, Gray Motor or more accurately, Marvin Cole's technology.

This does not mean it is but from the evidence of what is in the articles, the documented effects of the plasma ignition, my hands on experience and my own educated guesses and intuitions, it appears to be more accurately in line with what Gray is doing than

anything that has surfaced in the public domain as far as replication attempts.

Many months ago, when the water sparkplug circuit first appeared, I built it, studied it and tested it extensively and saw that in concept, it is exactly what the Gray technology is describing. The difference is that there isn't an inductive load in the water spark plug circuit of course.

I wanted to limit the current at the spark plug gap so I put a choke there to see if it kept the plasma from imploding back in on itself. It didn't seem to stop that from happening, but the plasma burst became silent, green and the coil was charging!

Here is a video of that test:
http://www.youtube.com/watch?v=N78E_qA4ws0

More information came forward on the original Gray technology while writing this chapter. It is a claim and some possible authentic documentation discussing the concept that there was an actual arc between the CORES of two repelling electromagnetic coils.

If this is so, this adds more dimensions to the possibility of what Gray was doing and more importantly...what Marvin Cole really was up to. This complicates matters but until we take the cover off (discover) the truth to this matter, the

collision principles appear to have the most merit.

The only time I have run electricity through the core of a coil (separate from the windings) was on some crude experiments with Felix Ehrenhaft's work on MAGNETIC CURRENT (not electron current). I recommend following up on this page to learn more about his profound work:

<http://www.rexresearch.com/ehrenhaf/ehrenhaf.htm>

Anyway, I hope that this will help advance the replication efforts in regards to this technology!

Veljko Milkovic Mechanical Oscillator

Here is a mechanical pendulum that gets input from gravity and centrifugal force. The mechanical work that it produces is multiplied compared to what is going into it.

Normally, it is thought that for every action there is an opposite and equal reaction but think about this... what if the reaction has been designed to be clever enough to help give a forward continuous movement, which actually adds to the output instead of taking away?

Figure 11.18 Veljko Mechanical Oscillator

The picture above is the “two-stage mechanical oscillator.”

By swinging the weight at one end the other end goes up and down to pump water. It doesn't matter which way the little weight at one end swings. It goes one way and the other end moves and does productive work. When the weight swings back, it doesn't counter work being done, it still produces work pumping water!

You simply have to see the videos for yourself. There are a lot of them so search for Veljko Milkovic in Youtube and check out his website: <http://www.veljkomilkovic.com/>

Also, check out Peter Lindemann's page about this technology: <http://www.free-energy.ws/veljko-milkovic.html> it has links to some great documents.

There are unlimited amounts of applications for this from generating power, pumping water, and whatever your own creativity comes up with.

Since not everyone has experience with electronics, this is a good analog machine with nothing but mechanical parts. I'll show you another one in the next section that you'll like!

DDWFTTW

Direct Down Wind Faster Than The Wind or just DWFTTW

Imagine a little wind driven cart sitting on the road. But instead of a sail, it has a propeller. The propeller is attached to some gears, which are in turn attached to the wheels. As the wind blows and turns the propeller, the shaft turns the gears and the gears turns the wheels.

This is great and all, but what is the benefit to this and why not just use a sail? Well, it is thought that the max speed the cart can travel is whatever the speed the wind is pushing it – as long as there is enough aerodynamics involved, etc... to allow it to even get up to wind speed.

Get this... the cart with this propeller setup accelerates faster than the wind is pushing it! So if the wind is blowing at 5 miles an hour, the cart may take off at 6 miles an hour!

How? This little mind-bender is so simple, you're going to laugh when you see it in action...and YES it does work.

Check out this discussion for all the links:
<http://www.energeticforum.com/renewable-energy/3324-dwfttw-down-wind-faster-than-wind.html>

I won't post any pictures because I want to keep you in suspense.

For starters, check out these must see videos:

<http://www.youtube.com/watch?v=aJpdWHFqHm0>

These below two videos show the device on a treadmill. The treadmill moves the wheels, which turns the gears, and turns the shaft and propeller. The propeller pushes against the wind and gives forward thrust so that it moves against the moving treadmill more than what the treadmill is imparting to the wheels!

<http://www.youtube.com/watch?v=1BRvYZd81AQ>

<http://www.youtube.com/watch?v=4pgDs50A-Yw>

Here is a great reference site:

[http://www.peswiki.com/index.php/Directory:Directly Downwind Faster than the Wind](http://www.peswiki.com/index.php/Directory:Directly_Downwind_Faster_than_the_Wind)

Check it out and make up your own mind if you think it is a hoax or not. ☺

Tom Bearden

Energy From the Vacuum

There is a documentary series by Oscar-nominated Director William Gazecki called *Energy From the Vacuum*.³¹ It is named after Tom Bearden's book *Energy From the Vacuum*,³² which is *the bible* for vacuum energy technologies. The video is, in my opinion, the *must have* documentary on vacuum energy technologies.

You can see there are very real, very practical applications of understanding the vacuum energy. These technologies don't have anything to do with perpetual motion. The ideas of how these machines may work are theoretical but their existence is not.

They exist right here right now and the schematics are available for you to experiment with. Be resourceful and search the Internet for more information. Commercial units could be available in the near future.

³¹ William Gazecki, [*Energy From the Vacuum*](#)

³² T. E. Bearden, *Energy From the Vacuum*, 2002, <http://www.cheniere.org>

Rosemary Ainslie

COP 17 Heater

It is very rare to have an inventor freely place their work into the public domain. It is even rarer when they actually include a scientific model to describe how their invention works as well as all the plans necessary to actually duplicate it.

Rosemary Ainslie developed a new magnetic field model as well as a working heater based on some very simple but profound principles.

Circuits such as the Bedini devices utilize the collapsing magnetic field's "spike" to charge batteries without current. Some circuits use this potential to split water molecules. Some circuits even use this concept to light fluorescent light tubes with virtually no input. But there is nobody showing how to use this to generate heat except for Rosemary Ainslie.

The coil for heat generation is different from a regular coil intended to make a magnetic field. This type of coil is an inductive resistor. That is a resistor wound of wire that happens to be able to be charged like an electromagnetic coil.

Rosemary's circuit charges and discharges this inductive heater very fast and recovers the

energy back to the front. This makes the system VERY efficient.

What is so profound about Rosemary's system besides being able to produce 17 times more heat energy than electrical energy put into it is the fact that all this heat is **OBVIOUSLY totally independent** of the input energy! That means that for the umpteenth time in the free energy field, thermodynamics have been brutally destroyed beyond all recognition. Can anyone honestly claim that any laws about conservation of energy even hold up when it comes to the field of electromagnetics? They can of course argue the point but it is obvious they already lost!

I have provided a complete document you can download of Rosemary Ainslie's work, which is complete with a few of her papers, a patent application as well as schematics including a modified schematic by Peter Lindemann. You can find this COP 17 HEATER document on the same download page where you downloaded The Quantum Key.

Summary

This chapter has been a highlight of some of what I believe to be some of the most promising NET systems as discussed in the chapter on Open vs. Closed Systems.

There are a lot of video links, discussion, and documents to pour through if you are so inclined.

The general public and many people in the “green” field will never hear about these technologies unless you share them with those people. They need to know.

Much of the “green” technology that is being developed is still just a bandage. Some has merit and it a true solution but most is not.

I think you would have to agree, the technologies in this chapter are nothing like what the mainstream media is showing you and you cannot learn about these in school.

If you have been inspired by something that was in this book or this chapter and want to help spread the word, the next chapter is for you!

12

Abundance is Yours

*“It is not only my right and my privilege to walk in the **abundance** God has for me, it is my responsibility...just as it is my responsibility to live the rest of my truth.” – Jan Denise*

There is no business that is more gratifying than something that allows us to earn money by helping others. There are two that you should know about.

The first is the PATHS affiliate program: http://www.paths-123.com/business_opportunity.php and the second is *The Quantum Key* affiliate program. If you have any questions about the PATHS program, simply reply to any of the newsletters from *The Quantum Key* or White Dragon Press.

Since *The Quantum Key* is now released as an E-book, it allowed me to offer it through an affiliate program and give away an incredibly * HUGE * 60% commission!

Imagine making 60% every time someone buys *The Quantum Key* by clicking on a link that you provide. It can be in an email, posted in a

forum or maybe it is somewhere on your website.

For details, just visit this link:
http://www.thequantumkey.com/clickbank_affiliate_program.html.

For convenience, I have posted most of the information from there right here so you have a copy of it.

There is almost an identical copy of what I have on the affiliate page. Just make sure that you are a member at Clickbank and you use your own Clickbank link. Join my affiliate list and I hope to have a long and prosperous, mutually beneficial relationship with you!

The Quantum Key

Clickbank Affiliate Program

"HUGE Affiliate Opportunity! Earn 60% Commissions On This INCREDIBLY HOT E-book."

(Get Paid Every 7 Days Like Clockwork from ClickBank With

Their New Weekly Pay Out Scheme.)

Dear Friend,

Thanks for becoming an affiliate for
The Quantum Key!

**IF YOU DO NOT SEE A PLACE TO ENTER

Your Affiliate Link

This is your affiliate link. Copy it and whenever you paste that link, make sure to replace the xxxxx with your Clickbank nickname.

If you do not have one [click here now](#) to get one.

<http://xxxxx.1.qiman.hop.clickbank.net>

The "***The Quantum Key***" E-book has just been released on the Clickbank marketplace!

The **selling price of the E-book is \$37 and you earn 60%** after Clickbank take their fees.

You earn \$19.93 per sale.

Please understand that The Quantum Key's target audience is generally split between two large groups of people.

1. Anyone with an interest in alternative energy, free energy, green technologies, or sustainability. Most people in this field believe they are involved in sustainable solutions, while most of them are actually operating within the box of closed systems. They do not even realize that systems can output more than what you put into them so the establishment has done a great job at keeping the green market from seeing the real solutions.
2. Anyone with an interest in consciousness, law of attraction, manifesting, abundance, energy healing or other concepts that are tied to a lot of the new age

or self help gurus. These groups share principles of nature without ever showing specific almost tangible concepts of the mechanics of how nature is really operating. It is all left in fluffy jargon that sounds nice and mystical but by not showing the real mechanics of these natural principles, people are left in the dark and kept dependent on the next seminar, the next movie and so on.

SUBJECT: Can you really get more out of
something than you put into it without violating
the laws of physics?

- by Aaron Murakami

© Aaron Murakami - All Rights reserved
<http://xxxxx.1.qiman.hop.clickbank.net>

For ages, the notion of getting more out of a
system than it input by the operator has always
been ridiculed as being an idea fit for the
perpetual motion nuts.

But, what if there is one specific distinction that
once known, allows one to easily see what needs

to be applied in order to tap into the Holy Grail of abundance?

The taboo physics that explain all of this are finally available in simple English that just about anyone can understand! And in case you're wondering, no, this has nothing to do with perpetual motion.

The mind power, law of attraction and abundance world is full of 'gurus' telling you how to manifest anything you want in life and a bunch of other related promises. It is usually filled with new age jargon and explaining that the Universe will supply what you need because of this and that are simply not good enough.

If they understood the principles that nature really operate by, wouldn't they be able to give you straight answers on specific principles based on real science and not rhetoric and fluffy woo woo?

Wouldn't they be able to apply this knowledge to a machine to show how a machine can also be built according to these principles to give more output than what you have to put in? They should be able to do this if they understand the real natural principles involved but they aren't showing any of this.

If there were a simple, straightforward way of finding out, wouldn't that be worth a few minutes of your time? Check it out here:

<http://xxxxx.1.qiman.hop.clickbank.net>

Thousands of people have already found out.
Now you can too.

With Gratitude,
Aaron Murakami

Aaron Murakami has been educating thousands of people over the years in various advanced scientific concepts in physics and consciousness.

Subject: Physics of Abundance
Finally Revealed!

Dear Subscriber,

I've got a quick question for
you today...

Are you fed up with law of
attraction and abundance 'gurus' and
their books that give you nothing
but a bunch of recanned new age
jargon hype?

I know I am! Want to finally sink
your teeth into some real working
knowledge about these natural
principles? Get it from someone that
actually has hands on experience
applying this to to become a
legendary synchronicity manifester
and also has applied this to
machines that output more than what
is put into them!

I thought it was too good to be true until I actually learned it! It's like taking the red pill and going down the rabbit's hole! If you think you're ready to finally learn it, then go here:

<http://xxxxx.1.qiman.hop.clickbank.net>

Many thanks,
YOUR NAME

Ezine Solo Ad #2

Subject: Revealed - Taboo Physics shows how to get more out of something than you put in!

Dear Subscriber,

Have you heard it is impossible to have a machine give you more back than what you put in? Anyone making these claims are supposed to be perpetual motion nuts because something this outlandish is supposed to violate the laws of physics.

Or does it? See for yourself here...

<http://xxxxx.1.qiman.hop.clickbank.net>

In fact, it is not only possible but is totally permitted by a field of physics that has been suppressed for many years.

When you learn this, you will realize it is to common sense that it is unbelievable that it isn't taught to every high school student!

Now the 'Average Joe' can know more about the principles of nature than most physicists!

Actually, many of the concepts taught in this extraordinary book are so simple to understand that even a 10 year old can know what gravity is!

WAKE UP!

Times have changed and you should too. Stake your claim - its your birthright!

<http://xxxxx.1.qiman.hop.clickbank.net>

Thanks,

Subject: Young Quantum Sage Shatters Paradigms

A researcher than is balanced in both advanced energy and consciousness sciences reveals paradigm shattering principles of nature to the masses.

After 22 years of probing the secrets of nature through meditation and hands on experimentation, Aaron Murakami, has released a ground-breaking book that explains to the average person how to connect the dots from the quantum world to the large scale universe, which includes solving the mystery of gravity, inertia and time.

The principles can be applied to consciousness sciences so that people can understand how a thought turns from an intangible bit of virtual potential into a physically manifested thing.

Aaron believes that any person with a holistic mindset absolutely must be able to *GROK* the seamless connection of how the universe is built in order to finally understand our seamless connection to it.

Gravity for example interacts with every single cell, molecule, atom and subatomic particle that makes up our body. Many people in the energy-healing field talk about energy and potential but none of them can even tell you what energy and potential is, where it comes from and how it is tapped.

Aaron's book, *The Quantum Key - The Simple Guide to the Quantum World - Unlock Your Infinite Abundance* has many distinctions and as Aaron says,

"Our blind spots must be illuminated by the light of distinctions. This is the way to empowerment."

Aaron Murakami believes that mankind needs to wake up to this higher consciousness before any of the big global issues can be solved. As long as the masses are kept in the dark about the true principles of nature and the physics of abundance, they will remain slaves to the deception.

He believes that there is no better time than now to release *The Quantum Key* outside of his close community of researchers.

Thank You!

“Gratitude is not only the greatest of virtues, but the parent of all the others.” - Cicero

From the bottom of my heart, THANK YOU for taking the time to invest in this copy of *The Quantum Key*.

Visit my websites and join the *White Dragon Press* mailing list at www.whitedragonpress.com if you haven't already.

You'll be privy to upcoming updates on these technologies and information on upcoming books that focus on other topics.

Make sure to check out my bookstore to see books about the people I referenced in *The Quantum Key*. [The Quantum Key Bookstore](http://astore.amazon.com/thequantumkey-20) <http://astore.amazon.com/thequantumkey-20>

If you're looking for a great gift, buy someone a copy of this E-book or buy them a copy of my paperback version of the 3rd edition. It isn't as complete as this book but the main thing that is different is that the chapter on practical application included what is in this one

and a bit about the energy technologies. It doesn't have this full-blown chapter on the Aetheric Energy Machines.

It does however have the fundamental concepts that I share in this book. It is 5X8 inches and is black and white. It is an easy read with big font and for less than \$10, you can't go wrong. The instructions on how to order them are in the back of this E-book. You can get bulk discounts!

Also, be sure to check out my recommended products and websites in the last few pages.

Again, thank you and stay tuned for the next book that shows you things relating to the mind and consciousness that nobody else is talking about! I mean nobody!

With Gratitude,

A handwritten signature in black ink that reads "Aaron Murakami". The script is fluid and cursive, with a large initial 'A' and 'M'.

p.s. I receive quite a few requests for strategic partnerships and alliances. I appreciate these offers and am more inclined to partner with someone as long as they're doing something that is related to what I'm already doing. Simply E-mail me at [info @ thequantumkey.com](mailto:info@thequantumkey.com) with your ideas.

Author's Bio

Aaron Murakami is a passionate and dedicated researcher, inventor, innovator, and entrepreneur. He enjoys attracting to himself powerful paradigm shattering technologies and knowledge that has the potential to cause a massive paradigm shift in global consciousness.

In his professional life, Aaron has owned a health food store, been the CEO and president of several companies, has operated several online ventures, and is currently a marketing director for an international company. Aaron is also a co-founder of *Energetic Science Ministries*³³, which is dedicated to educating the public about concepts that link spirituality and holistic health to the quantum sciences.

³³ Energetic Science Ministries, <http://www.esmhome.org>

Call to Action

The Food and Drug Administration (FDA) works hard to take away YOUR rights to safe and effective healing methods. They don't want Americans exercising their God given freedom.

First, take a look at this wisdom from our founding fathers concerning health care.

"If people let government decide what foods they eat and what medicines they take, their bodies will soon be in as sorry a state as are the souls of those who live under tyranny."

- Thomas Jefferson, 3rd President of the U.S.A.,
writer of Declaration of Independence

"All tyranny needs to gain a foothold is for people of good conscience to remain silent." -
Thomas Jefferson, 3rd President of the U.S.A., writer
of Declaration of Independence

"I know of no safe depository of the ultimate powers of the society but the people themselves: and if we think them not enlightened enough to exercise their control with a wholesome discretion, the remedy is not to take it from them, but to inform them." -

Thomas Jefferson, 3rd President of the U.S.A., writer of Declaration of Independence

"The Constitution of this Republic should make special provision for Medical Freedom as well as Religious Freedom. To restrict the art of healing to one class of men and deny equal privileges to others will constitute a bastille [prison] of medical science. All such laws are un-American and despotic."

- Benjamin Rush, M.D., signer of the Declaration of Independence

WHAT CAN YOU DO?

Visit <http://www.healthfreedomusa.org/> and educate yourself on the matter.

Please stand up and do your duty as a *Spiritual Patriot* and say no to the FDA's oppressive actions against the people and to any form of medicalization of natural God-given methods of healing.

Ceramic Paint Additive *Insulating Paint Additive*

Reflects up to 90% of the heat back to the source

Insulate your home with a stroke of a brush

Based on NASA Technology

Can be mixed into any locally available house paint

Keep heat out in summer and reflect the heat back in during the winter

Drastically reduce the cost required to heat and cool your home

Add it to your own paint or get it pre-mixed

Ceramic Paint Additive

EcoRadiant Technology was born of this understanding.

- “What if” we could create or discover products that allow people to save money each and every day of their lives?
- “What if” we could truly alter an individual’s health and well-being through the discovery and formulation of natural nutritional formulas?
- “What if” we could provide people the opportunity to create a better life through an exciting home-based business with a formula that allows anyone to succeed?
- “What if” we could create more than just a company, but a community, a financially secure community where you enjoy the benefits of good health, not just for yourself and your family, but for all those with whom you share our life-enhancing message?
- “What if” we could help industry control pollution and improve energy efficiency?

EcoRadiant Technology has found answers to all of these questions.
